**Hydrology and Water Supply**

**for Pond Aquaculture** Kyung H. Yoo,Claude E. Boyd,2012-12-06 In 1979 several graduate students in the Department of Fisheries and Allied Aquacultures at Auburn University met with one of the authors CEB and asked him to teach a new course on water supply for aqua culture They felt that information on climatology hydrology water distribution systems pumps and wells would be valuable to them Most of these students were planning to work in commercial aquaculture in the United States or abroad and they thought that such a course would better prepare them to plan aquaculture projects and to communicate with engineers contractors and other specialists who often become involved in the planning and construction

phases of aquaculture endeavors The course was developed and after a few years it was decided that more effective presentation of some of the material could be made by an engineer The other author KHY accepted the challenge and three courses on the water supply aspects of aquaculture are now offered at Auburn University A course providing background in hydrology is followed by courses on selected topics from water supply engineering Most graduate programs in aquaculture at other universities will eventually include similar coursework because students need a formal introduction to this important yet somewhat neglected part of aquaculture We have written this book to serve as a text for a course in water supply for aquaculture or for individual study The book is divided into is concerned two parts Soil Mechanics and Foundation Design Liiban A.
