Good, Better, Best! Ester Joos Esteban, 2013-10-21. Mothers and fathers are the original human resource managers. Whatever the era or circumstances, their challenges remain constant: to pass on a legacy of positive work attitudes and habits to their children. In *Good, Better, Best*, author Esther Esteban focuses on five work-related habits: diligence, order, responsibility, cooperation, and cheerfulness. These are the building blocks of good work that take time and considerable training to develop. When they are practiced naturally, quickly, constantly, and with ease, they evolve into stable qualities of the human personality: virtues. Motivating children to do their work, school work, play, household chores, hobbies, sports, and to sustain and complete tasks well are the challenges of parents, caregivers, and teachers. This sequel to *The Work of Children* is an inspirational guide to help them in that process.

Cultural Psychology Robyn M. Holmes, 2020-01-30. Cultural Psychology draws upon major psychological topics, theories, and principles to illustrate the importance of culture in psychological inquiry. Exploring how culture broadly connects to psychological processing across diverse cultural communities and settings, it highlights the applied nature of cultural psychology to everyday life events and situations, presenting culture as a complex layer in which individuals acquire skills, values, and abilities. Two central positions guide this textbook: one that culture is a mental and physical construct that individuals live, experience, share, perform, and learn, and the second that culture shapes growth and development. Culture-specific and cross-cultural examples highlight connections between culture and psychological phenomena. The text is multidisciplinary, highlighting different perspectives that also study how culture shapes human phenomena. Topics include an introduction to cultural psychology, the history of cultural psychology, cultural evolution, and cultural ecology, methods, language, and nonverbal communication, cognition, and perception. Through coverage of social behaviour, the book challenges students to explore the self, identity, and personality, social relationships, social attitudes, and intergroup contact in a global world, and social influence, aggression, violence, and war. Sections addressing growth and development include human development and its processes, transitions, and rituals across the lifespan, and socializing agents, socialization practices, and child activities. Additionally, the book features discussions of emotion and motivation, mental health, and psychopathology, and future directions for cultural psychology. Chapters contain teaching and learning tools, including case studies, multidisciplinary contributions, thought-provoking questions, class and experiential activities, chapter summaries, and additional print and media resources.

The Tell Matthew Hertenstein, 2013-11-12. Every day we make predictions based on limited information: in business and at home. Will this company's stock performance continue? Will the job candidate I just interviewed be a good employee? What kind of adult will my child grow up to be? We tend to dismiss our predictive minds.

as prone to bias and mistakes but in *The Tell* psychologist Matthew Hertenstein reveals that our intuition is surprisingly good at using small clues to make big predictions and shows how we can make better decisions by homing in on the right details Just as expert poker players use their opponents tells to see through their bluffs Hertenstein shows that we can likewise train ourselves to read physical cues to significantly increase our predictive acumen By looking for certain clues we can accurately call everything from election results to the likelihood of marital success IQ scores to sexual orientation even from flimsy evidence such as an old yearbook photo or a silent one minute video Moreover by understanding how people read our body language we can adjust our own behavior so as to ace our next job interview or tip the dating scales in our favor Drawing on rigorous research in psychology and brain science Hertenstein shows us how to hone our powers of observation to increase our predictive capacities A charming testament to the power of the human mind *The Tell* will to paraphrase Sherlock Holmes show us how to notice what we see
