

Name:

Date:

Student Exploration: Hurricane Motion

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: air pressure, Coriolis effect, eye, hurricane, knot, meteorologist, precipitation

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

A **hurricane** is a large, rotating tropical storm with wind speeds of at least 74 miles per hour. Since 1990, **meteorologists** have regularly used satellite images to track hurricanes.

1. The satellite image at right shows Hurricane Katrina just before it hit New Orleans in 2005.  Label the hurricane on the image.
2. How do you think meteorologists predicted the arrival of a hurricane before the 1990s?

They would either have people fly into the hurricane when the ocean tides turned rogue and everything became windy and stormy.

Gizmo Warm-up

You can use data collected from weather stations to study the characteristics of hurricanes. The *Hurricane Motion* Gizmo has three simulated weather stations. Turn on **Show weather station data**. Make sure **Wind**, **Cloud cover**, and **Pressure** are all checked.

The tails on each station symbol point in the direction the wind is coming from. The flags on the tail indicate wind speed, measured in **knots**. (One knot is equal to 1.15 mph.) A short line extending from the tail indicates 5 knots of wind. A longer line indicates 10 knots. A triangular flag indicates 50 knots. Add all the flags together to get the wind speed.

The number in the station's upper right is the **air pressure**, which is measured in millibars (mb).

The circle symbol indicates the percentage of cloud cover, as shown in the table at right.

Degree of Cloud Cover

Clear	1/8	1/4	3/8	1/2	5/8	3/4	7/8	Overcast

Use the information above to complete this table for station **A** on the Gizmo.

Wind speed (knots)	Wind from	Cloud cover	Pressure (mb)
30	North	1/8	1023.5
