Transitions Towards Sustainable Mobility Jo A.E.E. van Nunen,Paul Huijbregts,Piet Rietveld,2011-08-19 Delivering a sustainable transport system is not just a matter of adopting a number of technological innovations to improve performance in terms of people planet and profits A broader structural and societal transition is needed in technology as well as in institutions behavioural patterns and the economy as a whole In this broader view neither the free market nor the public sector will be the unique key player in making this transition happen Elements of such an approach are presented in this book in a number of domains integrating transport infrastructure and land use planning thus connecting fields that are rather unconnected in day to day policies experiments with dynamic transport optimization including reports on pilot projects to test the viability of transitions towards reliable transport systems describing a reversal from supply driven towards demand driven approaches and sustainable logistics and traffic management from local city distribution to global closed supply chain loops

Back to Basics International Monetary Fund,2019-04-11 This paper discusses about capitalism that is often thought of as an economic system in which private actors own and control property in accord with their interests and demand and supply freely set prices in markets in a way that can serve the best interests of society The essential feature of capitalism is the motive to make a profit In a capitalist economy capital assets such as factories mines and railroads can be privately owned and controlled labor is purchased for money wages capital gains accrue to private owners and prices allocate capital and labor between competing uses Although some form of capitalism is the basis for nearly all economies today for much of the past century it was but one of two major approaches to economic organization In the other socialism the state owns the means of production and state owned enterprises seek to maximize social good rather than profits

The Effect of Unclear Property Rights on Environmental Degradation and Increase in Poverty Matti Vainio, 1998

Insecure unclear or non-existent property rights explain why poor people suffer from or cause environmental degradation By better defining property rights poverty can be alleviated and the environment improved Governments have a special responsibility to provide corrective action in the presence of negative externalities because only governments can establish and enforce legal frameworks for regulating the use of environmental resources Moreover governments transfer resources between different social groups placing them in a unique position to eradicate poverty Unidirectional negative externalities are particularly anti-poor because the poor tend to be the victims Subsidies to energy agricultural inputs and many other potentially environmentally hazardous activities are unjustified not only because of their negative economic impact but also for environmental and poverty reasons Many country and local case studies show that local communities lose resources to powerful outside the community groups Governments need to reverse this and support instead the management of common property resources They also need to change the property regimes of de facto and de jure open access resources In both cases justification lies in the higher sustainable yield on natural assets and in the reduction of poverty
