JavaScript was created to add life to webpages Just like HTML and CSS JavaScript is written in plain text files with a js extension As previously mentioned JavaScript can be used to accomplish many useful operations on the frontend like validating forms alerting users storing temporary data and performing calculations to name just a few Pro tip Apart from the name itself JavaScript has no relation to Java Beginners often get confused between the two languages Remember that Java is an entirely different language made for a different purpose although you ll still find it running on certain website backends
