**What Are Physical Properties?**

Start with the table in the chapter below to start to understand physical properties of your common substances.

A physical property is a characteristic that can be observed without changing the identity of the substance. Most of the properties of an object can only be observed, that is, they can be observed on objects under certain changes, such as weight, temperature, the properties of heat, colour are determined by the properties of the substance. The colour depends on  $\lambda$ .

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the substance you have. They show that no matter how large or small a sample of material is, the particular property is always the same.
