Chemical Process Technology 2nd Edition Delft University:

Introduction to Chemical Process Technology P. J. van den Berg, W. A. de Jong, 1980 **Chemical Process Technology** Jacob A. Moulijn, Michiel Makkee, Annelies E. van Diepen, 2013-03-21

With a focus on actual industrial processes e.g. the production of light alkenes, synthesis gas, fine chemicals, polyethylene, it encourages the reader to think out of the box and invent and develop novel unit operations and processes. Reflecting today's emphasis on sustainability, this edition contains new coverage of biomass as an alternative to fossil fuels and process intensification. The second edition includes new chapters on Process Intensification and Processes for the Conversion of Biomass. Updated and expanded chapters throughout with 35% new material overall. Text boxes containing case studies and examples from various different industries e.g. synthesis loop designs, Sasol I Plant, Kaminsky catalysts, production of Ibuprofen, click chemistry, ammonia synthesis, fluid catalytic cracking. Questions throughout to stimulate debate and keep students awake. Richly illustrated chapters with improved figures and flow diagrams. Chemical Process Technology Second Edition is a comprehensive introduction linking the fundamental theory and concepts to the applied nature of the subject. It will be invaluable to students of chemical engineering, biotechnology, and industrial chemistry, as well as practising chemical engineers. From reviews of the first edition: The authors have blended process technology, chemistry, and thermodynamics in an elegant manner. Overall, this is a welcome addition to books on chemical technology. The Chemist: Impressively wide ranging and comprehensive, an excellent textbook for students with a combination of fundamental knowledge and technology. Chemistry in Britain: now Chemistry World.

Process Technology André B. de Haan, 2015-04-24

Process Technology provides a general overview about chemical and biochemical process technology. It focuses on the structure and development of production processes, main technological operations, and the important aspects of process economics. The theoretical foundations in each chapter are supplemented by case studies and examples in a clear and instructive manner to illustrate the practical aspects. The author highlights operating principles, reasons for application, and available industrial equipment of technological operations. Aim is to facilitate those without a process technology background in multi-disciplinary cooperation with bio-chemical engineers by providing an overview of this exciting field. The textbook is organized into seven distinct parts: Structure of the chemical industry and bio-chemical processes; Bio-chemical reaction engineering; Molecular separations: distillation, extraction, absorption, adsorption; Mechanical separations: filtration, sedimentation, membranes; Particle and final product manufacturing; Development, scale up, design, and safety of processes; Major industrial process descriptions. *Coal-Fired Power Generation Handbook* James G. Speight, 2021-02-17

Coal accounts for approximately one quarter of world energy consumption and of the coal produced worldwide, approximately 65% is shipped to electricity producers and 33% to industrial consumers, with most of the remainder going to consumers in the residential and commercial sectors. The total share of total world energy consumption by coal is expected to increase to almost 30% in 2035. This book describes the challenges and steps by which electricity is

produced from coal and deals with the challenges for removing the environmental objections to the use of coal in future power plants. New technologies are described that could virtually eliminate the sulfur, nitrogen, and mercury pollutants that are released when coal is burned for electricity generation. In addition, technologies for the capture of greenhouse gases emitted from coal-fired power plants are described, and the means of preventing such emissions from contributing to global warming concerns. Written by one of the world's leading energy experts, this volume is a must-have for any engineer, scientist, or student working in this field, providing a valuable reference and guide in a quickly changing field.

Biomass Power for the World Wim P. M. van Swaaij, Sascha R. A. Kersten, Wolfgang Palz, 2015-04-06. Energy from solar radiation fixated by self-assembling plant structures creates biomass that is converted to energy carriers fit for application in today's and tomorrow's energy-generating equipment. The central theme of this book is the development of the current largest renewable energy source for efficient applications in modern and developing countries.

Product and Process Design Jan Harmsen, André B. de Haan, Pieter L. J. Swinkels, 2018-05-22. Product and Process Design: Driving Innovation is a comprehensive textbook for students and industrial professionals. It treats the combined design of innovative products and their innovative manufacturing processes, providing specific methods for BSc, MSc, PDEng, and PhD courses. Students, industrial innovators, and managers are guided through all design steps in all innovation stages: discovery, concept, feasibility, development, detailed engineering, and implementation, to successfully obtain novel products and their novel processes. The authors' decades of innovation experience in industry, as well as in teaching BSc, MSc, and post-academic product and process design courses, thereby including the latest design publications, culminate in this book.

Chemical Engineering Dynamics, Includes CD-ROM John Ingham, 2007. In this book, the modelling of dynamic chemical engineering processes is presented in a highly understandable way using the unique combination of simplified fundamental theory and direct hands-on computer simulation. The mathematics is kept to a minimum, and yet the nearly 100 examples supplied on the CD-ROM illustrate almost every aspect of chemical engineering science. Each example is described in detail, including the model equations. They are written in the modern, user-friendly simulation language Berkeley Madonna, which can be run on both Windows PC and Power Macintosh computers. Madonna solves models comprising many ordinary differential equations using very simple programming, including arrays. It is so powerful that the model parameters may be defined as sliders, which allow the effect of their change on the model behavior to be seen almost immediately. Data may be included for curve fitting, and sensitivity or multiple runs may be performed. The results can be seen simultaneously on multiple graph windows or by using overlays. The resultant learning effect of this is tremendous. The examples can be varied to fit any real situation, and the suggested exercises provide practical guidance. The extensive experience of the authors, both in university teaching and international courses, is reflected in this well-balanced presentation, which is suitable for the teacher, the student, the chemist, or the engineer. This book provides a greater understanding of the formulation and use of mass and energy balances for chemical

engineering in a most stimulating manner This book is a third edition which also includes biological environmental and food process examples Chemical Engineering Progress ,2000 Re-Engineering the Chemical Processing Plant Andrzej Stankiewicz, Jacob A. Moulijn, 2004 The first guide to compile current research and frontline developments in the science of process intensification PI Re Engineering the Chemical Processing Plant illustrates the design integration and application of PI principles and structures for the development and optimization of chemical and industrial plants This volume updates professionals on emerging PI equipment and methodologies to promote technological advances and operational efficacy in chemical biochemical and engineering environments and presents clear examples illustrating the implementation and application of specific process intensifying equipment and methods in various commercial arenas **Gas Processing** James G.
