Hellenic Architecture Edward Bell, 1920 **Architecture and Building**, 1925 *Construction Materials Manual* Manfred Hegger, Volker Auch-Schwelk, Matthias Fuchs, Thorsten Rosenkranz, 2013-02-12 Until now the few existing systematic texts on construction materials have primarily been directed at building engineers An overview for architects which also considers the importance of construction materials in the sensory perception of architecture including tactile qualities smell color and surface structure has not been available With the publication of the Construction Materials Manual all that has changed As a basic work aimed equally at the questions and perspectives of architects and building engineers it will bring together all of the above mentioned viewpoints It addresses fundamental questions of sustainability including life span environmental impact and material cycles while also presenting material innovations All of the principal conventional and innovative construction materials are comprehensively documented with attention to their production manufacture fabrication treatment surfaces connections and characteristics International examples help to illustrate their use in architecture where a building's appearance is often defined by a single material Thus the Construction Materials Manual will support the daily work of architects and engineers in the choice of construction materials in a comprehensive and at the same time vivid and stimulating manner **Stone**, 1911 **Sacred Buildings** Rudolf Stegers, 2008-05-16 The building of religious structures represents a rare opportunity for the architect to concentrate on the creation of volume space and form Sacred architecture is far less determined than other building tasks by functional requirements norms and standards As a

rule it is free to unfold as pure architecture Thus in design terms this building task offers enormous freedoms to the architect At the same time however the special atmospherics of sacred spaces call on the part of the architect for a highly sensitive treatment of religion and the relevant cultural and architectural traditions In a systematic section this volume introduces the design technical and planning fundamentals of building churches synagogues and mosques In its project section it also presents about seventy realized structures from the last three decades Drawing upon his in depth knowledge of the subject and his many years of publishing experience the author offers a valuable analysis of the conceptual and formal aspects that combine to create the religious impact of spaces e g the ground plan the shapes of the spaces the incidence of light and materiality
