

Patterns of Crustal Activity

INTRODUCTION: Studies of plate tectonics have shown that crustal activities are occurring world-wide. Earthquakes, volcanoes, and mountain ranges do not occur randomly. There are special areas in which they occur. In this lab you will look for the relationships between the locations of these crustal activities.

OBJECTIVE: You will plot the areas in which earthquakes and volcanoes occur most frequently, the depths at which they happen and identify other crustal activities that appear related to these areas. You will then analyze your maps to discover the worldwide patterns of earthquake and volcano distribution.

MATERIALS: Lab 1007 page 5, 3 pencils (brown, red, green), Mountain Yearbook.

PROCEDURE:

Part 1

1. On your **World-Wide Crustal Activity Map** label the Equator, Prime Meridian and International Date Line. Label the North, South, East and West Hemispheres of the map.
2. Using the information from the **Locations Chart: Earthquakes**, put a green dot on the map at the location of the first earthquake and label it **E1**.

3. On the **Data Table** place an X on the line to represent the type of boundary the earthquake is on. Write the names of the two plates that are interacting at this location.

4. Repeat this process for the next earthquake until all have been plotted.

5. Use the information from the **Locations Chart: Volcanoes**, put a red dot on the map at the location of the first volcano and label it **V1**.

6. On the **Data Table** place an X on the line to represent the type of boundary the volcano is on. Write the names of the two plates that are interacting at this location.

7. Repeat this process for the

next volcano until all have been plotted.

9. Lightly shade the areas in which earthquakes and volcanoes are found, use the same colors that you used when you plotted the earthquakes and volcanoes.
