Hot start reverse transcriptase: an approach for improved real-time RT-PCR performance

Nils Rutschke^{1,2*}, Jan Zimmermann¹, Ronny Möller^{1,2}, Gerd Klöck², Mathias Winterhalter² and Annika Leune¹

Abstract

Background: Reverse transcriptase is an indispensable enzyme for real-time reverse transcriptase (RT)-PCR, a standard method in molecular diagnostics for detection and quantification of defined RNA molecules. The prevention of non-specific products due to elongation of misprimed oligonucleotides by the enzyme at temperatures beneath the specific annealing temperature is one of the biggest challenges in real-time RT-PCR.

In the present study, an aptamer directed against the reverse transcriptase was analyzed for its potential to attain a temperature-dependent reverse transcriptase ("hot start" RT).

Findings: The hot start effect was investigated in a one-step real-time RT-PCR assay for the detection of Middle East respiratory syndrome coronavirus (MERS-CoV). Results with aptamer revealed a reduced RT activity at low temperatures while achieving full activity at the specific annealing temperature of 55 °C. Sensitivity (limit of detection (LoD) 95 %) of the MERS-CoV assay was increased by about two times in the presence of aptamer.

Conclusions: The study demonstrates the potential of aptamer-dependent hot start RT for the improvement of diagnostic real-time RT-PCR assays.

Keywords: Real-time RT-PCR; Reverse transcriptase; Hot start; MERS-CoV

Introduction

Real-time RT-PCR is the method of choice in molecular diagnostics for detection and quantification of defined RNA molecules (Mackay 2004). This technique utilizes reverse transcriptase (RT) to convert RNA into complementary DNA (cDNA), a thermostable DNA-dependent DNA polymerase for the amplification of specific target sequences and target specific probes (oligonucleotides) labelled with fluorophores for the detection of amplified DNA (Gibson et al. 1996).

Real-time RT-PCR is regarded as a method with high sensitivity and specificity (Martel et al. 2002). However, this is challenged by non-specific products generated by elongation of misprimed primer that competes with the synthesis of specific amplification products in each cycle (Chou et al. 1992; Li et al. 1990). The probability of non-specific product formation increases with the complexity

of the real-time RT-PCR system and the background nucleic acid in the specimen (Browne et al. 1997; Handschlar et al. 2009). Ultimately, non-specific products can severely decrease sensitivity as well as specificity of real-time RT-PCR assays (Sharkey et al. 1994; Birch et al. 1996; Jayasena 1999).

Assays for the detection of RNA viruses are often highly complex (high quantity of different oligonucleotides) due to low sequence conservation of the RNA genome (Gardner et al. 2004; Browne et al. 1997). In general, mispriming occurs at temperatures below the specific annealing temperature of the oligonucleotides (Jayasena 1999). Thus, the formation of non-specific products can be reduced by using hot start variants of the enzymes, which are inactive at low temperatures and activated at higher temperatures, appropriate for specific primer annealing to the target nucleic acid (Birch et al. 1996).

Several biological or chemical hot start concepts exist for *Taq* polymerase, a thermostable DNA-dependent DNA polymerase. The *Taq* polymerase can be inactivated by binding of specific antibodies or aptamers, by incubation with chemicals or by altered molecular kinetics

Low-Cost Approach to PCR Eva Harris, 1998-12-31 The polymerase chain reaction PCR is a technique used to replicate specific pieces of DNA millions of times which permits the detection and analysis of minute amounts of nucleic acids Since its introduction in the late 1980s this technique has been applied not only in molecular biology research but also in fields as diverse as anthropology phylogeny and forensics However despite the large impact of PCR many of its applications remain within the confines of research and the academic environment Now in A Low Cost Approach to PCR Appropriate Transfer of Biomolecular Techniques Dr Eva Harris makes this elegantly simple technique more accessible to researchers physicians and laboratory workers throughout the world She provides a description of the theoretical basis of the technique the practical details of the method and the philosophy behind the technology transfer program that she developed over the last ten years The book serves as a guide for potential users in developing countries and for scientists in developed countries who may wish to work abroad In addition the low cost approach outlined in this book can be useful for high school undergraduate or continuing education programs in the United States While the specific applications of PCR outlined in the book are immediately useful to the study of infectious diseases the approach presented can be generalized to a number of other technologies and situations The book will help laboratories in many areas of the world generate information on site for use by physicians epidemiologists public health workers and health policy professionals to develop new strategies for disease control

Molecular Diagnostics for Dermatology Gregory A. Hosler, Kathleen M. Murphy, 2014-04-30 Molecular diagnostics is an exploding field and recent advances in our understanding of the molecular basis of disease have provided a platform for the development of new diagnostic tests as well as tests to predict tumor behavior and potential response to targeted therapy This textbook provides a reference and practical guide to molecular diagnostics for dermatologists and dermatopathologists It outlines our current understanding of the molecular underpinnings of dermatologic disease describes the appropriate use of currently available molecular tests and explains the interpretation of these tests in the context of

diagnosis and management Tests relating to various disorders are covered including but not confined to melanoma genodermatoses and infectious disease Pitfalls are highlighted and user friendly algorithmic approaches presented
