

Chapter 1

An Introduction to the Study of Human Development

Human development is a study of physical, psychological, and cognitive changes that transpire throughout the course of one's life within a cultural and social context

Studying child development helps one understand...

physical changes of children

cognitive changes (language)

psychosocial changes (emotions)

Historic beliefs about childhood:

Societies abound with different beliefs about the nature of children and their development. Such beliefs affect

every aspect of children's lives, from what behaviors are expected of them at different ages to how they are

disciplined, what skills and values they are taught, how they spend their time each day, and with whom they

are allowed to socialize

preformationism: The belief that adult like capacities, desires, interests, and emotions are present in early childhood.

"Needless to say, 3-year-olds make poor caregivers, and infants in their charge sometimes died due to their inattention or inability to intervene appropriately when problems arose."

→ there were no childhood guidelines

→ different expectations for children in different time periods

people used to think that children were born into "original sin"
