information and diversity is generated by somatic mutation The issue is unresolved but Cunningham has taken many of the data which have previously been used to support the germ line theory and shows that the interpretations are not always clear cut and can frequently be used to support another possibility that new specificities may arise after stimulation of appropriate cells by antigens And he has produced experimental evidence to support this notion On the other hand there can be little doubt that to a considerable degree the specificity of the immune response is determined by the selection by antigen of cells with receptors of appropriate specificity This is essentially a surface phenomenon [Contemporary Topics in Molecular Immunology](#) ,1974 [Current Topics](#) ,1930 [Electricity](#) ,1918 **Gas World** ,1902 **Common School Education and Teachers World** ,1893 **Courses Catalog - University of Illinois at Urbana-Champaign** University of Illinois at Urbana-Champaign,2000 Includes undergraduate and graduate courses [Teachers World](#) ,1895
