Big Data for Big Decisions Krishna Pera,2022-12-30 Building a data driven organization DDO is an enterprise wide initiative that may consume and lock up resources for the long term Understandably any organization considering such an initiative would insist on a roadmap and business case to be prepared and evaluated prior to approval This book presents a step by step methodology in order to create a roadmap and business case and provides a narration of the constraints and experiences of managers who have attempted the setting up of DDOs The emphasis is on the big decisions the key decisions that influence 90% of business outcomes starting from decision first and reengineering the data to the decisions process chain and data governance so as to ensure the right data are available at the right time every time Investing in artificial intelligence and data driven decision making are now being considered a survival necessity for organizations to stay competitive While every enterprise aspires to become 100% data driven and every Chief Information Officer CIO has a budget Gartner estimates over 80% of all analytics projects fail to deliver intended value Most CIOs think a data driven organization is a distant dream especially while they are still struggling to explain the value from analytics They know a few isolated successes or a one time leveraging of big data for decision making does not make an organization data driven As of now there is no precise definition for data driven organization or what qualifies an organization to call itself data driven Given the hype in the market for big data analytics and AI every CIO has a budget for analytics but very little clarity on where to begin or how to choose and prioritize the analytics projects Most end up investing in a visualization platform like Tableau or QlikView which in essence is an improved version of their BI dashboard that the organization had invested into not too long ago The most important stakeholders the decision makers are rarely kept in the loop while choosing analytics projects This book provides a fail safe methodology for assured success in deriving intended value from investments into analytics It is a practitioners handbook for creating a step by step transformational roadmap prioritizing the big data for the big decisions the 10% of decisions that influence 90% of business outcomes and delivering material improvements in the quality of decisions as well as measurable value from analytics investments The acid test for a data driven organization is

when all the big decisions especially top level strategic decisions are taken based on data and not on the collective gut feeling of the decision makers in the organization

Becoming/Creating a Data Driven Organization Yesenia Monroy,Charlisse Rivers,Alyssa Ballard,Joe Carballo,2018 From its inception in 2006 Thermo Fisher Scientific was a powerhouse encompassing Fisher Scientific which was founded over a century ago in 1902 and Thermo Electric co founded in 1956 Even though the company s revenue has been rising for a decade they recognize that to stay on top of the industry they need to embrace and implement data science applications and analytics throughout their 70 000 employee company The CSUSM MBA program and our team were engaged to identify some of the best practices and industry leaders to help Thermo Fisher in their journey to become a more data driven organization We also concentrated on analyzing successful data science integrations in other companies with the goal of drawing from these companies experiences and challenges to make a successful transition and embedding Data Science in their culture The team interviewed fourteen Thermo Fisher Biosciences Division stakeholders two Subject Matter Experts at California State University San Marcos and three company leaders Our results found that the most significant issues across Thermo Fisher regarding data analytics and their current state include the number of systems in use to share data cross functionally This lack of standardization was evident in our analysis The way data is communicated to stakeholders varied as well as some inconsistencies In addition to hearing some of the pain points in the current process most of the interviewees have a positive

outlook in the companies efforts to be a more data driven organization The stakeholders have seen recent changes and process improvements in different areas of the division and are aware of the capabilities that data science can bring to their organization Given the access we had the stakeholders we were able to interview and our research on data science we compiled five general recommendations for Thermo Fisher s Biosciences Division These recommendations focus on addressing the needs in structure resources and alignment given the division s current state Overall our recommendations are intended to assist Thermo Fisher in becoming a more data driven organization and integrate data science across multiple functions and departments in their organization Recommendations include continuing to start small and creating a timeline to guide stakeholder and monitor strategy as well as having a single strategy implementation plan focused on customer data to increase revenue sales Another recommendation is that Thermo Fisher improves communication between their divisions and add training tools and modules so that every member in every division knows what actions need to be taken Lastly we recommend that the stakeholders take initiative in becoming more knowledgeable in data science in general such as attending conferences being flexible in change and always inquiring to learn more
