

METHOD SCOPE

VOLATILE ORGANIC COMPOUNDS IN VARIOUS SAMPLE MATRICES USING EQUILIBRIUM-DRIVEN GC/MS

820-846 is not intended to be an analytical testing method. Therefore, method procedures are written based on the assumption that they will be performed by analysts who are formally trained in at least the basic principles of chemical analysis and in the use of the subject technology.

In addition, 820-846 methods, with the exception of required method use for the analysis of method-defined parameters, are intended to be guidance methods which contain general information on how to perform an analytical procedure or technique which a laboratory can use as a basic starting point for generating its own detailed standard operating procedure (SOP), either for its own general use or for a specific project application. The performance data included in this method are for guidance purposes only, and are not intended to be used and not be used as absolute QC acceptance criteria or for the purpose of laboratory accreditation.

1.0 SCOPE AND APPLICATION

Please see Appendix B at the end of this document for a summary of changes from the previous version.

1.1 This method describes equilibrium-based static headspace preparation of volatile organic compounds (VOCs) in solid/liquid, semi-solid, aqueous and water-miscible liquid matrices for determination by gas chromatography (GC) or gas chromatography/mass spectrometry (GC/MS). This method is applicable to a wide range of organic compounds that have sufficiently high volatility to be effectively transferred from matrices using the described conditions. While the method is designed for use on samples containing low levels of VOCs in aqueous matrices, it may be applied to direct vapor partitioning, a solvent extraction and indirect introduction procedure as also described for solid samples containing high concentrations of VOCs or for oily matrices that may not be appropriate for the low concentration. The preparation method is provided to be combined with a determination method such as Methods 821, 822 or 823. This preparation method is appropriate for the compounds listed below, and it may also be appropriate for other VOCs included in the determination method (e.g., Sec. 1.1 of 820C) provided method performance is demonstrated to be acceptable for the intended use of the data.
