## Specimen Collection and Transport Overview

Proper specimen collection and transport is critical to accurate laboratory results. This guide provides detailed instructions for collecting and transporting various types of microbiology specimens, including blood, urine, sputum, and wound swabs. It covers the selection of appropriate collection devices, the use of transport media, and the necessary handling and storage conditions to maintain specimen integrity.

**Blood Specimens:** For blood culture, use a sterile collection device. Collect the specimen aseptically and transport it to the laboratory in a temperature-controlled container. The container should be labeled with the patient's name, date of birth, and the date and time of collection.

**Urine Specimens:** Use a sterile urine collection cup or a syringe. Collect the specimen aseptically and transport it in a cool, dry container. The container should be labeled with the patient's name, date of birth, and the date and time of collection.

**Sputum Specimens:** Use a sterile sputum collection cup. Collect the specimen aseptically and transport it in a cool, dry container. The container should be labeled with the patient's name, date of birth, and the date and time of collection.

**Wound Swabs:** Use a sterile swab. Collect the specimen aseptically and transport it in a cool, dry container. The container should be labeled with the patient's name, date of birth, and the date and time of collection.

**Other Specimens:** For other types of specimens, use the appropriate collection device and transport it in a cool, dry container. The container should be labeled with the patient's name, date of birth, and the date and time of collection.

**Storage and Handling:** Store specimens in a cool, dry place. Do not freeze specimens unless specifically instructed. Handle specimens with care to avoid contamination and leakage.

**Labeling:** Label all specimens with the patient's name, date of birth, and the date and time of collection. Use a permanent marker for labeling.

**Temperature Control:** Maintain specimens at the appropriate temperature during transport. Use ice packs for refrigerated specimens and heat packs for frozen specimens.

**Documentation:** Document all specimen collection and transport information in the patient's medical record. This includes the date and time of collection, the type of specimen, and the transport conditions.

**Quality Control:** Perform quality control tests on all specimens to ensure accuracy. This includes testing for contamination and verifying the concentration of the specimen.

**Shipping:** Ship specimens in a cool, dry container. Use a shipping label that includes the patient's name, date of birth, and the date and time of collection.

**Reception:** Upon receipt at the laboratory, check the specimen label for accuracy. Verify the date and time of collection and the type of specimen.

**Storage:** Store specimens in a cool, dry place. Do not freeze specimens unless specifically instructed. Handle specimens with care to avoid contamination and leakage.

**Labeling:** Label all specimens with the patient's name, date of birth, and the date and time of collection. Use a permanent marker for labeling.
