 mainly involve mass and heat transfer processes and chemical reactors It is assumed that the reader has already a basic  
 knowledge about controlled processes and about differential and integral calculus as well as about matrix algebra  
 Automatic control problems involve mathematics more than it is usual in other engineering disciplines The book treats problems  
 in a similar way as it is in mathematics The problem is formulated at first then the theorem is stated Only necessary conditions  
 are usually proved and sufficiency is left aside as it follows from the physical nature of the problem solved This helps to follow  
 the engineering character of problems The intended audience of this book includes graduate students but can also be of  
 interest to practising engineers or applied scientists     Control Processes in Modified Handwriting Joseph Peterson, June
