on reference for practitioners who apply geotechnical instrumentation in the construction industry Feasibility Study for a Freeway Corridor Infrastructure Health Monitoring (IHM) Instrumentation Testbed, 2012 This research report discusses the planning necessary for the proper development acquisition installation and maintenance of an effective health monitoring network for transportation infrastructure systems A comprehensive literature search was conducted and the materials were compiled into a database reviewed and synthesized Data elements vital for maintaining safe and functional transportation infrastructures were identified and discussed for bridge structures pavements and geotechnical structures Moreover the steps necessary for planning an instrumentation system for a particular structure are presented Sample design plans for the transportation infrastructure systems that are typically constructed in Wisconsin were obtained from WisDOT and suggested instrumentation plans were developed for these transportation systems One of the objectives of the research project is to identify urban freeway construction projects that could efficiently serve as hosts for an infrastructure health monitoring IHM instrumentation testbed Major current and near future construction projects in Wisconsin were identified and critically evaluated to identify a candidate project to host the IHM testbed Among the candidates the Zoo Interchange reconstruction project is recommended for hosting the infrastructure health monitoring testbed Cost estimates based on current market prices are provided for the instrumentation plans developed for IHM of bridge structures pavements and geotechnical structures To provide an example of using IHM data in applications archived data from the Marquette Interchange instrumentation project was used to develop vehicle wander patterns and load spectra data both in the form needed to conduct a mechanistic appraisal of the pavement structure using the DARWin ME software The research team designed and conducted an IHM survey of state highway agencies in the U S and Canada The survey showed that 46 percent of state DOTs have implemented health monitoring applications for transportation infrastructure The survey also identified the impediments facing state DOTs in implementing IHM systems

Advanced Unsaturated Soil Mechanics Charles W.W. Ng, Chao Zhou, Junjun Ni, 2024-10-24 Unsaturated soil is a three phase material that is ubiquitous on the Earth's surface and exhibits complex behaviour which becomes more complex in response to the Earth's changing climate and increasing engineering activities This is because the former affects its moisture and temperature conditions significantly and the latter governs its stress state and suction condition This book is designed to meet the increasing challenges of climate change and engineering activities by covering the mechanics and engineering of unsaturated soil in a logical manner It comprises four major parts Water retention and flow characteristics Shear strength and stiffness at various temperatures State dependent elasto plastic constitutive modelling Field monitoring and engineering applications This second edition uniquely covers fundamental topics on unsaturated soil that are not covered in other similar books including the state dependency of soil water retention behaviour and water permeability functions such as dependence on engineering activities small strain stiffness considering the influence of wetting drying cycles and recent suction history such as that due to climate change

suction effects on dilatancy and peak shear strength cyclic thermal effects on soil behaviour state dependent elastoplastic constitutive modelling of monotonic and cyclic behaviour engineering applications such as the South to North Water Transfer Project an earthen landfill cover system devoid of geomembrane in the Xiaping landfill Shenzhen and a 15 m deep multi propped excavation in Tianjin China

Engineering Geology and Geological Engineering for Sustainable Use of the Earth's Resources, Urbanization and Infrastructure Protection from Geohazards Janusz Wasowski, Daniele Giordan, Piernicola Lollino, 2017-07-11

The ongoing population growth is resulting in rapid urbanization new infrastructure development and increasing demand for the Earth's natural resources e.g. water oil gas minerals This together with the current climate change and increasing impact of natural hazards imply that the engineering geology profession is called upon to respond to new challenges It is recognized that these challenges are particularly relevant in the developing and newly industrialized regions The idea beyond this volume is to highlight the role of engineering geology and geological engineering in fostering sustainable use of the Earth's resources smart urbanization and infrastructure protection from geohazards We selected 19 contributions from across the globe 16 countries five continents which cover a wide spectrum of applied interdisciplinary and multidisciplinary research from geology to engineering By illustrating a series of practical case studies the volume offers a rather unique opportunity to share the experiences of engineering geologists and geological engineers who tackle complex problems working in different environmental and social settings The specific topics addressed by the authors of chapters included in the volume are the following pre design site investigations physical and mechanical properties of engineering soils novel affordable sensing technologies for long term geotechnical monitoring of engineering structures slope stability assessments and monitoring in active open cast mines control of environmental impacts and hazards posed by abandoned coal mines assessment of and protection from geohazards landslides ground fracturing coastal erosion applications of geophysical surveying to investigate active faults and ground instability numerical modeling of seabed deformations related to active faulting deep geological repositories and waste disposal aquifer assessment based on the integrated hydrogeological and geophysical investigation use of remote sensing and GIS tools for the detection of environmental hazards and mapping of surface geology This volume is part of the proceedings of the 1st GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures Egypt 2017
