About Airmar Product Table A R:

Air-Sea Interaction and Oceanic Extremes Lichuan Wu, Jinbao Song, Victor Alari, Leonie Esters, 2024-12-24 Air sea interactions control the exchange of mass momentum and heat between the atmosphere and the ocean. Substantially they significantly affect the development of atmospheric and oceanic systems from submesoscale to global scales. Oceanic extremes i.e. cyclones, storms, freak waves, polar lows, storm surge etc. pose a significant hazard to offshore activities and coastal society. Air sea interaction processes are complex and play a central role in the development of those oceanic extremes. Improved understanding of the air sea interaction processes and describing them in weather models and Earth System Models can improve their prediction and mitigate the potential damages. The energy distribution affected by air sea interactions can change the large scale circulation and alter the climatology of the oceanic extremes. Despite an overall improvement in the understanding of air sea interactions there are still many knowledge gaps particularly under extreme conditions.

Urban Agriculture for Growing City Regions Undine Giseke, Maria Gerster-Bentaya, Frank Helten, Matthias Kraume, Dieter Scherer, Guido Spars, Fouad Amraoui, Abdelaziz Adidi, Said Berdouz, Mohamed Chlaida, Majid Mansour, Mohamed Mdafai, 2015-09-07 This book demonstrates how agriculture can play a determining role in integrated climate optimised urban development. Agriculture within urban growth centres today is more than an economic or social left over or a niche practice. It is instead a complex system that offers multiple potentials for interaction with the urban system. Urban open space and agriculture can be linked to a productive green infrastructure. This forms new urban rural linkages in the urbanizing region and helps shape the city. But in order to do this agriculture has to be seen as an integral part of the urban fabric and it has to be put on the local agenda. *Urban Agriculture for Growing City Regions* takes the example of Casablanca one of the fastest growing cities in North Africa to investigate this approach. The creation of synergies between the urban and rural in an emerging megacity is demonstrated through pilot projects, design solutions and multifunctional modules. These synergies assure greater resource efficiency particularly regarding the use and reuse of water and they strengthen regional food security and the social integration of multiple spheres. A transdisciplinary research approach brings together different scientific disciplines and local actors into a process of integrated knowledge production. The book will have a long lasting legacy and is essential reading for researchers, planners, practitioners and policy makers who are working on urban development and urban agricultural strategies.
