This work was done as an undergraduate student: if you really don't understand something in one of these proofs, it is very possible that it doesn't make sense because it's wrong. Any questions or corrections can be directed to jason.rosendale@gmail.com.

Exercise 1.1.1

(a) is not associate: $3 - (2 - 1) \neq (3 - 2) - 1$. (b),(c),and (d) can be shown to be associative by grinding out the algebra and showing that $a * (b * c) = (a * b) * c$. (e) is not associative, as can be shown by letting $a = b = c = 2$.

Exercise 1.1.2

(a) and (e) can be shown to not be commutative by letting $a = 1, b = 2$. (b),(c) and (d) can be shown to be commutative by grinding out the algebra.

Exercise 1.1.3

$$\overline{a + b + c}$$
$$= a + \overline{b + c} \quad \text{def. of modular addition}$$
$$= a + \overline{b + c} \quad \text{def. of modular addition}$$

Exercise 1.1.4

$$\overline{ab} \cdot c$$
$$= a \cdot \overline{b} \cdot c \quad \text{def. of modular multiplication}$$
$$= a \cdot \overline{bc} \quad \text{def. of modular multiplication}$$

Exercise 1.1.5

To be a group, each element a would need a multiplicative inverse b such that $ab = 1$; but $\bar{0}$ has no such inverse.

Exercise 1.1.6

(b) is not closed: $1/14 + 1/14 = 1/7$. (c) is not closed: $2/3 + 2/3 = 4/3$. (d) is not closed: $2 + (-3/2) = 1/2$. (f) is not closed: $1/2 + 1/3 = 5/6$. (a) and (e) are groups under addition.

Exercise 1.1.7

That $x * y$ is well-defined follows directly from the fact that $+, -,$ and the greatest integer function are well defined on $\Re$. To prove that G is a group: G has an identity element ($0 \in G$ and $0 * x = x * 0 = x - [x] = 0$), each

principles of engineering and the rules of business The power of algebra lies in the efficient symbolic representation of complex ideas which also presents the main difficulty in learning it It is easy to forget the underlying structure of algebra and rely instead on a surface knowledge of algebraic manipulations Most students rely on surface knowledge of algebraic manipulations without understanding the underlying structure of algebra that allows them to see patterns and apply it to multiple situations McCallum focuses on the structure from the start   **Algebra** Mervin Laverne Keedy,1986   **Solutions of the examples in Elementary algebra for schools, by H.S. Hall and S.R. Knight** Henry Sinclair Hall,1891   *The Algebraic Solutions to Minimum and Maximum Problems* Joe J. Ettl,2009-10-30 This book is a how to do booklet The geometric problems have the answers to each max and min solution The high school and community college student should verify each solution by using values before and after that are close to the answers A knowledge of only algebra avoids the use of calculus This approach shows how algebraic formulae can be created The use of a dimensionless multiplier is the way to avoid the use of calculus The number of calculations is made easier with the use of a programmable calculator or a computer using some programmable language   *Semantics and the Syntax of Algebra Solution Manual* Afshin Azari-Vala,2018-10-26 This publication provides detailed solutions for the problems in the exercise sets in the textbook Semantics and the Syntax of Algebra by the author The coverage includes both even numbered and odd numbered problems in the exercise sets As our aim is to promote formulations and algorithms that promote fluency for the most part we have provided detailed solutions as opposed to partial solutions or just answers Alternative approaches that meet the criteria for fostering fluency in solving mathematical problems are included in the solutions When an exercise extends a concept that is introduced in the body of the textbook or introduces a new one further detail about the topic is included in the form of side notes This should help the reader connect the ideas that are presented in the body of the text to their extensions in the exercises
