Semi-Markov Migration Models for Credit Risk Guglielmo D'Amico,Giuseppe Di Biase,Jacques Janssen,Raimondo

Manca,2017-05-24 Credit risk is one of the most important contemporary problems for banks and insurance companies
Indeed for banks more than forty percent of the equities are necessary to cover this risk Though this problem is studied by
large rating agencies with substantial economic social and financial tools building stochastic models is nevertheless
necessary to complete this descriptive orientation This book presents a complete presentation of such a category of models
using homogeneous and non homogeneous semi Markov processes developed by the authors in several recent papers This
approach provides a good method of evaluating the default risk and the classical VaR indicators used for Solvency II and
Basel III governance rules This book is the first to present a complete semi Markov treatment of credit risk while also
insisting on the practical use of the models presented here including numerical aspects so that this book is not only useful for
scientific research but also to managers working in this field for banks insurance companies pension funds and other
financial institutions **Cornell University Register and Catalogue** Cornell University,1919 Books and Pamphlets,
