Introduction to Java and Software Design Nell B. Dale,Chip Weems,Mark R. Headington,2003
Introduction to Java and Software Design breaks the current paradigms for teaching Java and object oriented programming in a first year programming course The Dale author team has developed a unique way of teaching object oriented programming They foster sound object oriented design by teaching students how to brainstorm use filtering scenarios CRC cards and responsibility algorithms The authors also present functional design as a way of writing algorithms for the class responsibilities that are assigned in the object oriented design Click here for downloadable student files This book has been developed from the ground up to be a Java text rather than a Java translation of prior works The text uses real Java I O classes and treats event handling as a fundamental control structure that is introduced right from the beginning The authors carefully guide the student through the process of declaring a reference variable instantiating an object and assigning it to the variable Students will gradually develop a complete and comprehensive understanding of what an object is how it works and what constitutes a well designed class interface [Ivor Horton's Beginning Java](#) Ivor Horton,2011-09-27

C++ and Object-Oriented Numeric Computing for Scientists and Engineers Daoqi Yang,2011-06-28 This book is intended to be an easy concise but rather complete introduction to the ISO ANSI C programming language with special emphasis on object oriented numeric computation for students and

professionals in science and engineering The description of the language is platform independent Thus it applies to different operating systems such as UNIX Linux MacOS Windows and DOS as long as a standard C compiler is equipped The prerequisite of this book is elementary knowledge of calculus and linear algebra However this prerequisite is hardly necessary if this book is going to be used as a textbook for teaching C and all the sections on numeric methods are skipped Programming experience in an other language such as FORTRAN C Ada Pascal Maple or Matlab will certainly help but is not presumed All C features are introduced in an easy way through concepts such as functions complex numbers vectors matrices and integrals which are familiar to every student and professional in science and engineering In the final chapter advanced features that are not found in FORTRAN C Ada or Matlab are illustrated in the context of iterative algorithms for linear systems such as the preconditioned conjugate gradient CG method and generalized minimum residual GMRES method Knowledge of CG GMRES and preconditioning techniques is not presumed and they are explained in detail at the algorithmic level Algebra for College Students Margaret L. Lial, E. John Hornsby, Terry McGinnis, 2008 The Lial series has helped thousands of readers succeed in developmental mathematics through its approachable writing style relevant real world examples extensive exercise sets and complete supplements package Review of the Real Number System Linear Equations Inequalities and Applications Graphs Linear Equations and Functions Systems of Linear Equations Exponents Polynomials and Polynomial Functions Factoring Rational Expressions and Functions Roots Radicals and Root Functions Quadratic Equations and Inequalities Additional Functions and Relations Inverse Exponential and Logarithmic Functions More on Polynomial and Rational Functions Conic Sections Further Topics in Algebra For all readers interested in Algebra

Deitel, 2010 The Deitels groundbreaking How to Program series offers unparalleled breadth and depth of object oriented programming concepts and intermediate level topics for further study This survey of Java programming contains an optional extensive OOD UML 2 case study on developing and implementing the software for an automated teller machine The Eighth Edition of this acclaimed text is now current with the Java SE 6 updates that have occurred since the book was last published The Late Objects Version delays coverage of class development until Chapter 8 presenting the control structures methods and arrays material in a non object oriented procedural programming context *Computing Fundamentals with Java* Rick Mercer, 2002 Computing Fundamentals with Java is the current effort in the author's 11 year journey of integrating object oriented programming into the first computer science course while retaining the commonly accepted fundamentals of computing In addition to traditional topics and the newer objects and classes this text provides three bonus chapters on object oriented software development in the context of a case study This book is written to clearly present fundamental concepts to beginning programmers *Data Structures* Elliot B. Koffman, Paul A. T. Wolfgang, 2021-02-03 Data Structures Abstraction and Design Using Java offers a coherent and well balanced presentation of data structure implementation and data structure applications with a strong emphasis on

problem solving and software design Step by step the authors introduce each new data structure as an abstract data type ADT explain its underlying theory and computational complexity provide its specification in the form of a Java interface and demonstrate its implementation as one or more Java classes Case studies using the data structures covered in the chapter show complete and detailed solutions to real world problems while a variety of software design tools are discussed to help students Think then code The book supplements its rigorous coverage of basic data structures and algorithms with chapters on sets and maps balanced binary search trees graphs event oriented programming testing and debugging and other key topics Now available as an enhanced e book the fourth edition of Data Structures Abstraction and Design Using Java enables students to measure their progress after completing each section through interactive questions quick check questions and review questions

Java Collections David A. Watt, Deryck F.
