OPERATING SYSTEMS

An aerial photograph of a large group of people, likely a marching band or a large group of students, arranged in a complex grid pattern on a dark, possibly paved, surface. The people are wearing various colored uniforms, including red, blue, and yellow. The grid is formed by thin white lines on the ground. The overall scene is viewed from a high angle, looking down at the group.

Elements of Distributed Computing Vijay K. Garg,2002-05-23 A lucid and up to date introduction to the fundamentals of distributed computing systems As distributed systems become increasingly available the need for a fundamental discussion of the subject has grown Designed for first year graduate students and advanced undergraduates as well as practicing computer engineers seeking a solid grounding in the subject this well organized text covers the fundamental concepts in distributed computing systems such as time state simultaneity order knowledge failure and agreement in distributed systems Departing from the focus on shared memory and synchronous systems commonly taken by other texts this is the first useful reference based on an asynchronous model of distributed computing the most widely used in academia and industry The emphasis of the book is on developing general mechanisms that can be applied to a variety of problems Its examples clocks locks cameras sensors controllers slicers and synchronizers have been carefully chosen so that they are fundamental and yet useful in practical contexts The text s advantages include Emphasizes general mechanisms that can be applied to a variety of problems Uses a simple induction based technique to prove correctness of all algorithms Includes a variety of exercises at the end of each chapter Contains material that has been extensively class tested Gives instructor flexibility in choosing appropriate balance between practice and theory of distributed computing

Fast and Scalable Cloud Data Management Felix Gessert,Wolfram Wingerath,Norbert Ritter,2020-05-15 The unprecedented scale at which data is both produced and consumed today has generated a large demand for scalable data management solutions facilitating fast access from all over the world As one consequence a plethora of non relational distributed NoSQL database systems have risen in recent years and today s data management system landscape has thus become somewhat hard to overlook As another consequence complex polyglot designs and elaborate schemes for data distribution and delivery have become the norm for building applications that connect users and organizations across the globe but choosing the right combination of systems for a given use case has become increasingly difficult as well To help practitioners stay on top of that challenge this book presents a comprehensive overview and classification of the current system landscape in cloud data management as well as a survey of the state of the art approaches for efficient data distribution and delivery to end user devices The topics covered thus range

from NoSQL storage systems and polyglot architectures backend over distributed transactions and Web caching network to data access and rendering performance in the client end user By distinguishing popular data management systems by data model consistency guarantees and other dimensions of interest this book provides an abstract framework for reasoning about the overall design space and the individual positions claimed by each of the systems therein Building on this classification this book further presents an application driven decision guidance tool that breaks the process of choosing a set of viable system candidates for a given application scenario down into a straightforward decision tree
