### **Data Preparation for Data Mining Using SAS**

Mamdouh Refaat, 2010-07-27 Are you a data mining analyst who spends up to 80% of your time assuring data quality then preparing that data for developing and deploying predictive models And do you find lots of literature on data mining theory and concepts but when it comes to practical advice on developing good mining views find little how to information And are you like most analysts preparing the data in SAS This book is intended to fill this gap as your source of practical recipes It introduces a framework for the process of data preparation for data mining and presents the detailed implementation of each step in SAS In addition business applications of data mining modeling require you to deal with a large number of variables typically hundreds if not thousands Therefore the book devotes several chapters to the methods of data transformation and variable selection A complete framework for the data preparation process including implementation details for each step The complete SAS implementation code which is readily usable by professional analysts and data miners A unique and comprehensive approach for the treatment of missing values optimal binning and cardinality reduction Assumes minimal proficiency in SAS and includes a quick start chapter on writing SAS macros

### **Principles of Transaction Processing**

Philip A. Bernstein, Eric Newcomer, 2009-07-24 Principles of Transaction Processing is a comprehensive guide to developing applications designing systems and evaluating engineering products The book provides detailed discussions of the internal workings of transaction processing systems and it discusses how these systems work and how best to utilize them It covers the architecture of Web Application Servers and transactional communication paradigms The book is divided into 11 chapters which cover the following Overview of transaction processing application and system structure Software abstractions found in transaction processing systems Architecture of multitier applications and the functions of transactional middleware and database servers Queued transaction processing and its internals with IBM s Websphere MQ and Oracle s Stream AQ as examples Business process management and its mechanisms Description of the two phase locking function B tree locking and multigranularity locking used in SQL database systems and nested transaction locking System recovery and its failures Two phase commit protocol Comparison between the tradeoffs of replicating servers versus replication resources Transactional middleware products and standards Future trends such as cloud computing platforms composing scalable systems using distributed computing components the use of flash storage to replace disks and data streams from sensor devices as a source of transaction requests The text meets the needs of systems professionals such as IT application programmers who construct TP applications application analysts and product developers The book will also be invaluable to students and novices in application programming Complete revision of the classic non mathematical transaction processing reference for systems professionals Updated to focus on the needs of transaction processing via the Internet the main focus of business data processing investments via web application servers SOA and important new TP standards Retains the practical non mathematical but thorough conceptual basis of the first edition

*Data Model Patterns: A Metadata Map*

David C. Hay, 2010-07-20 *Data Model Patterns A Metadata Map* not only presents a conceptual model of a metadata repository but also demonstrates a true enterprise data model of the information technology industry itself It provides a step by step description of the model and is organized so that different readers can benefit from different parts It offers a view of the world being addressed by all the techniques methods and tools of the information processing industry for example object oriented design CASE business process re engineering etc and presents several concepts that need to be addressed by such tools This book is pertinent with companies and government agencies realizing that the data they use represent a significant corporate resource recognize the need to integrate data that has traditionally only been available from disparate sources An important component of this integration is management of the metadata that describe catalogue and provide access to the various forms of underlying business data The metadata repository is essential to keep track of the various physical components of these systems and their semantics The book is ideal for data management professionals data modeling and design professionals and data warehouse and database repository designers A comprehensive work based on the Zachman Framework for information architecture encompassing the Business Owner s Architect s and Designer s views for all columns data activities locations people timing and motivation Provides a step by step description of model and is organized so that different readers can benefit from different parts Provides a view of the world being addressed by all the techniques methods and tools of the information processing industry for example object oriented design CASE business process re engineering etc Presents many concepts that are not currently being addressed by such tools and should be
