Lucky for one young cancer patient in 1956 that Henry Kaplan, had already come to Stanford with an unusual goal to turn a device used by the physicists on campus—the linear accelerator—into a tool for fighting cancer. That patient, a 2-year-old boy suffering from a tumor in his eye, was the first to undergo X-ray treatment from a medical linear accelerator that Kaplan developed with campus physicists. The treatment saved the child's sight and he lived the rest of his life with his vision intact.

It all came about because Kaplan thought he could find a way to focus intense X-rays to destroy a tumor without harming surrounding healthy tissues—and he thought the physicists would be the ones to help him do so. "In the 1950s, I began to hear cocktail party conversations about an interesting new *atom smasher* being developed on the campus by Bill Hanson and Edward Ginzton and their colleagues," Kaplan recalled in an 1983 interview, the year before his death.
