Histograms and SGS Modeling

Histograms are used daily for interpretation, quality control, and modeling in Petrel. This TIPS&TRICKS document briefly describes how histograms are built and used for QC but primarily focuses on their use in Petrophysical property modeling, specifically Sequential Gaussian Simulation (SGS). Porosity from the Gulfaks demo data distributed with each Petrel release will be used to demonstrate histogram input to SGS. We will demonstrate the dramatic impact these histograms have on property distribution in the model. Probably the most important point to learn from this paper is that histograms for each zone and facies of the model must be reviewed to ensure that the model is reasonable, represents the data, and matches the geologic interpretation.

Figure: Porosity histograms for one zone from: initial logs (top left) and up-scaled cells (top center), and from models built using histogram input control: model—using up-scaled cells (top right), model—using reasonable data analysis (bottom left), model—using mean and std dev (bottom center), and model—using extreme data analysis (bottom right). Note the amount of variation that can exist for the same rock unit.
