Reframing the Social Professor Poe Yu-ze Wan, 2013-01-28 Drawing extensively on the research findings of natural and social sciences both in America and Europe Reframing the Social argues for a critical realist and systemist social ontology designed to shed light on current debates in social theory concerning the relationship of social ontology to practical social research and the nature of the social It explores the works of the systems theorist Mario Bunge in comparison with the approach of Niklas Luhmann and critical social systems theorists to challenge the commonly held view that the systems based approach is holistic in nature and necessarily downplays the role of human agency Theoretically sophisticated and investigating the work of a theorist whose work has until now received insufficient attention in Anglo American thought this book will be of interest to those working in the field of social theory as well as scholars concerned with philosophy of social science the project of analytical sociology and the nature of the relationship between the natural and social sciences

Doing Science: In The Light Of Philosophy Mario Augusto Bunge, 2016-11-25 The originality of this book is that it reverses the tables on all current schools of philosophy where philosophy and metaphysics are separated and isolated from the sciences The punch line for Bunge is that practitioners in all intellectual fields need to adopt the appropriate form of metaphysics Only then will they be enabled to create scientific research projects

Marx Philosophy Review of Books Nearly all philosophers have dealt with the outcomes of scientific research and have overlooked its philosophical presuppositions such as those of rationality and realism Although these presuppositions are mostly tacit and thus easily overlooked actually they are supremely important since some of them favor research whereas others hamper it For instance whereas subjectivism leads to navel gazing and uncontrolled fantasy realism encourages us to explore the world and check our conjectures This book examines science in the making a process it illustrates with many examples from the natural social and biosocial sciences Therefore it centers on the research process and its philosophical presuppositions It claims that the latter constitutes a sort of matrix for conceiving and nurturing scientific projects

Popper's Theory of Science Carlos Garcia, 2006-06-08 Popper s theory of science has been widely misunderstood and poorly represented in the literature on philosophy of science over the last three decades This book discusses the main issues in Popper s theory of science and after giving a careful characterization of each issue examines the main objections that have been raised against them and offers ways of circumventing them It demonstrates that Popper s theory can guide us again to a better understanding of the aim and the structure of science

Alex C. Michalos,1974 **Scientific Realism** Martin Mahner,2010-03-05 The prolific and indefatigable Mario Bunge has been writing books and articles on almost every facet of philosophy for nearly fifty years At a time when much contemporary philosophy is mired in obfuscating jargon and devoid of purpose Bunge s clarity of thought and expression as well as his commitment to serious philosophical issues stand out in sharp relief Because of the sheer size of his published works which include the monumental eight volume *Treatise on Basic Philosophy* 1974 1989 there is a need for a relatively concise volume that provides a panorama of the philosophical system that Bunge has developed Martin Mahner has admirably filled this need with this thoughtful selection of thirty articles which illustrate most aspects of Bunge s philosophy The subject areas include metaphysics epistemology and methodology moral social and political philosophy and the philosophy of mathematics physics psychology social science and technology Spanning the years 1954 to 1999 the selections including both well known and wholly new articles demonstrate the range of Bunge s thought and his systematic approach anchored in scientific realism
