and is programmed in the Arduino programming language. It is used for a variety of different purposes and projects from simple projects such as building a thermostat to more advanced ones such as robotics, web servers, seismographs, home security systems, and synthesizers. This book will demonstrate how the Arduino can be used to develop a highly connected home security system by mobilizing a network of sensors which can feed alerts back to an Arduino when alarms are triggered. You will know the current state of security systems well supported by the designs that fit best for your environment. Also, we will see some current technologies such as NFC, Wi-Fi, and Bluetooth and will finally create a complete web interface that will allow us to remotely manage our system and even send daily bulletins with the summary of activity. Towards the end, we'll develop a wireless home security system by setting up security cameras and motion detectors, door and gate trips, temperature sensors. We will then set up a centralized remote access hub powered by the Arduino that allows sensors to connect to the wireless home network that can be viewed and interacted by the user. Style and approach: A step-by-step guide with numerous examples focusing on providing the practical skills required to build home security applications using Arduino.

Sensor Projects with Raspberry Pi Guillermo Guillen, 2019-12-17. Start solving world issues by beginning small with simple Raspberry Pi projects. Using a free IoT server, tackle fundamental topics and concepts behind the Internet of Things. Image processing and sensor topics aren't only applicable to the Raspberry Pi. The skills learned in this book can go on to other applications in mobile development and electrical engineering. Start by creating a system to detect movement through the use of a PIR motion sensor and a Raspberry Pi board. Then, further your sensor systems by detecting more than simple motion. Use the MQ2 gas sensor and a Raspberry Pi board as a gas leak alarm system to detect dangerous explosive and fire hazards. Train your system to send the captured data to the remote server ThingSpeak. When a gas increase is detected beyond a limit, then a message is sent to your Twitter account. Having started with ThingSpeak, we'll go on to develop a weather station with your Raspberry Pi. Using

the DHT11 humidity and temperature sensor and BMP085 barometric pressure and temperature sensor in conjunction with ThingSpeak and Twitter you can receive realtime weather alerts from your own meteorological system Finally expand your skills into the popular machine learning world of digital image processing using OpenCV and a Pi Make your own object classifiers and finally manipulate an object by means of an image in movement This skillset has many applications ranging from recognizing people or objects to creating your own video surveillance system With the skills developed in this book you will have everything you need to work in IoT projects for the Pi You can then expand your skills out further to develop mobile projects and delve into interactive systems such as those found in machine learning What You ll Learn Work with ThingSpeak to receive Twitter alerts from your systems Cultivate skills in processing sensor inputs that are applicable to mobile and machine learning projects as well Incorporate sensors into projects to make devices that interact with more than just code Who This Book Is For Hobbyists and makers working robotics and Internet of Things areas will find this book a great resource for quick but expandable projects Electronics engineers and programmers who would like to expand their familiarity with basic sensor projects will also find this book helpful
