Semiconductors and Organic Materials for Optoelectronic Applications B. Gil,R.L. Aulombard,B.C. Cavenett,G. Leising,F. Stelzer,Robert Triboulet,1997 The symposium UV Blue and Green Light Emission from Semiconductor Materials was part of the European Materials Research Society E MRS Spring Meeting in Strasbourg 4 7 June 1996 and it was arranged to bring together specialists in growth characterization and device fabrication of materials suitable for visible and UV optoelectronic applications Although the main emphasis was on the development of semiconductor diode lasers work was also presented on the progress of frequently doubling techniques which have an immediate application in commercial systems The proceedings are divided into Part I and Part II reflecting the two streams of research based on II VI semiconductors on the one hand and III V GaN based semiconductors on the other hand Although these two areas are competing vigorously for the realization of practical blue laser diodes there are many common problems particularly with doping and also the need for suitable substrates for the growth of lattice matched structures The invited talks were presented by speakers from Japan the USA and Europe with representation from both University and Industrial research groups In particular leaders in the development of blue lasers SONY II VI devices and Nichia GaN devices provided important device papers alongside the excellent contributions on a wide range of topics covering epitaxial growth optical structural and electrical measurements as well as problems of compensation of dopants and laser lifetimes The symposium Nonlinear Optical and Optoelectronics Organic Materials dealt with the development of organic molecules and polymers as potential replacements for existing materials in electronic optoelectronics and nonlinear optical devices

Calculation and Design of Two-dimensional Thermoelectric and Piezoelectric Materials San-Dong Guo,Guangzhao Wang,Yee Sin Ang,Huabing Yin,2023-08-25 The fascinating two dimensional 2D materials are being unconsciously applied in various fields from science to engineering which is benefited from the glamorous physical and chemical properties of mechanics optics electronics and magnetism The representative 2D

thermoelectric piezoelectric materials can directly convert thermal mechanical energy into electrical energy which can resolve the energy issues and avoid further environmental deterioration The thermoelectric or piezoelectric properties of various 2D materials such as graphene hexagonal boron nitride black phosphorus transition metal dichalcogenides TMDs arsenene metal carbides and nitrides MXenes and so on have been investigated in detail Although tremendous progress has been achieved in the past few years these properties still need to be improved for their practical application by designing new 2D materials strain engineering chemical functionalization etc In addition to this in 2D materials there are many other novel physical properties such as magnetism topology valley and so on The combination of thermoelectricity piezoelectricity with other unique properties may lead to novel device applications or scientific breakthroughs in new physics Overall the emergence of 2D thermoelectric and piezoelectric materials has expanded energy conversion research dramatically By combining this new device concept with the novel 2D materials original devices should have potential applications in energy harvesting
