**Pipelines and Risers** Yong Bai,2001-02-07 **Pipelines and Risers** **Abaqus for Catia V5 Tutorials** Nader G. Zamani,Shuvra Das,2006 ABAQUS for CATIA AFC the software tool uses the powerful pre and post processing capability of CATIA V5 to set up problems for solution using the versatile FEA solver ABAQUS Currently AFC is Capable of solving problems involving linear and non linear static as well as thermal analyses This tutorial book uses a step by step approach to uncover the different capabilities of AFC for the user The chapters cover a Wide variety of Topics and are arranged in a way such that the user of this text can start with simpler linear analyses and slowly get into more complex problems such as those involving non linear analyses multi step analyses temperature dependent behavior composite materials contact problems hybrid elements etc The authors expect the user of this book to have some prior knowledge of CATIA and after going through these tutorials someone who starts as a first time user of AFC can become an expert user of all the features of this tool

**ABAQUS for Engineers** Ryan Lee,2019-09-28 This tutorial book provides unified and detailed tutorials of ABAQUS FE analysis for engineers and university students to solve primarily in mechanical and civil engineering with the main focus on structural mechanics and heat transfer The aim of this book is to provide the practical skills of the FE analysis for readers to be able to use ABAQUS FEM package comfortably to solve practical problems Total 15 workshop tutorials dealing with various engineering fields are presented Access code for the workshop models was included This book will help you learn ABAQUS FE analysis by examples in a professional manner without instructors *Solving Nonlinear Problems with Abaqus* Asim Rashid,2020-04-26 This book aims to provide the practical information to perform finite element analysis of nonlinear problems in Abaqus It presents only the basic theory that is necessary for an analyst involved in performing analysis using commercial software The book presents 27 hands on tutorials providing intensive instructions to perform analysis of nonlinear problems During such analysis it is very common to face convergence difficulties Special sections are devoted to diagnose such difficulties and take the corrective action The cae models to practice the exercises are also provided for the student edition of the Abaqus Please visit the following page for further details and to download contents in PDF <https://asimrashid.info/wordpress/books/Abaqus-Analysis-User's-Manual-2004-ABAQUS-2006-ABAQUS-Analysis-User's-Manual-2008-ABAQUS-Analysis-User's-Manual-2006-Comparison-Between-Ansys-And-Abaqus-Using-Ultrasonic-Guided-Waves> Lluís Ortiz Alcalá,2013 The detection of corrosion in pipelines is an aspect of utmost importance as far as the fluid transportation industry is concerned and especially if they have a difficult access As they are installed outdoors or underground these kilometric conduits are under various weather and natural phenomena which may damage them causing loses and consequently serious natural disasters Over the years the most common way to check the pipelines thickness has been thanks to ultrasonic and Foucault currents The constraint of these techniques is that they only allow examining the thickness just under the probe Thus the checking procedure along its entire length becomes a very dull and long process The

problem arises when the access to certain stretches of those pipelines becomes extremely complex making this control impossible Upon needing to inspect these pipelines in a precise quickly and easy way along their length this control method is rarely used any more Low frequency guided waves are beginning to be used frequently to perform this task since their detection and location capability of corroded patches is very good The only drawback that this screening technique presents is that it only gives a rough estimate of the remaining wall thickness Currently guided waves are the most powerful method not only to detect inaccessible corroded patches but also to map their remaining thickness precisely Nowadays the world of computer science is so immensely vast that there is a large amount of software solutions to perform the same task The problem ascends when a user needs to complete a specific job and does not know which of the programs at his disposal to choose Some of the aspects that will prevail in his decision is if the software s interface is good looking the price of software s license the memory consumption at the time of performing a task but mainly the time taken to complete the work The aim of this report is to compare two of the most important programs for finite elements simulations Abaqus and ANSYS This analysis was done by applying a signal of 50 kHz and 10 cycles involved in a Hanning window in a titanium plate of 1 m long and with a thickness of 5 mm The reason why this study was done by simulating a plate instead of a pipeline without forgetting the aforementioned is because it was needed to simulate an easy geometry in order to shorten the time taken to solve the simulation by both software solutions The conclusions of this work were obtained by analysing which of the software solutions offered the most accurate displacements of a node located one meter far from where the signal was implemented In case that both were equally precise what was determinant for us at the time of choosing the best software program was which of both took the highest analysis speed less time and memory consumption to perform the task
