9.1 INTRODUCTION

In Unit 8 you have learnt the basic concept of contour integration involving analytic functions of a complex variable. But even an elementary development of complex integral calculus is not complete without the residue theorem. You may first like to know: What do we mean by the residue of an analytic function. We have introduced this concept in Sec. 9.2. The calculus of residues finds many important applications in mathematical analysis, physics and other sciences. A detailed discussion of all these is beyond the scope of this course. However, as an illustration, we have discussed the evaluation of definite integrals for which conventional integration methods fail. This forms the subject of discussion of Sec. 9.3. It may be remarked here that some of these

integrals are known to occur in many physical problems. For instance, the integral $\int_0^{\infty} \frac{\sin x}{x} dx$

occurs in the calculation of transition probabilities in quantum mechanics. The Fresnel integrals

$C(v) = \int_0^v \frac{\cos \pi t^2}{2} dt$ and $S(v) = \int_0^v \frac{\sin \pi t^2}{2} dt$ occur in the diffraction theory of light. You will

learn to evaluate such integrals by contour integration in the limit $v \rightarrow \infty$.

Objectives

After studying this unit, you should be able to:

- calculate residues at the singularities of an analytic function;
- calculate contour integrals involving analytic functions;
- evaluate definite real integrals of the form $\int_{-\infty}^{\infty} f(x) dx$, $\int_{-\infty}^{\infty} e^{ax} f(x) dx$ and $\int_0^{2\pi} f(\sin \theta, \cos \theta) d\theta$ using the method of residues; and
- determine the principal value of an integral.

9.2 THE RESIDUE THEOREM IN COMPLEX ANALYSIS

9.2.1 The Concept of Residue

From the previous unit you will recall that if a function $f(z)$ is analytic in a simply connected region, then according to Cauchy's integral theorem the value of the integral $\oint_C f(z) dz$ is always zero, where C is a closed contour lying wholly in R . If, on the other hand, $f(z)$ is analytic
