*Problems and Solutions for Undergraduate Analysis* Rami Shakarchi,2012-12-06 The present volume contains all the exercises and their solutions for Lang s second edition of Undergraduate Analysis The wide variety of exercises which range from computational to more conceptual and which are of vary ing difficulty cover the following subjects and more real numbers limits continuous functions differentiation and elementary integration normed vector spaces compactness series integration in one variable improper integrals convolutions Fourier series and the Fourier integral functions in n space derivatives in vector spaces the inverse and implicit mapping theorem ordinary differential equations multiple integrals and differential forms My objective is to offer those learning and teaching analysis at the undergraduate level a large number of completed exercises and I hope that this book which contains over 600 exercises covering the topics mentioned above will achieve my goal The exercises are an integral part of Lang s book and I encourage the reader to work through all of them In some cases the problems in the beginning chapters are used in later ones for example in Chapter IV when one constructs bump functions which are used to smooth out singulari ties and prove that the space of functions is dense in the space of regu lated maps The numbering of the problems is as follows Exercise IX 5 7 indicates Exercise 7 5 of Chapter IX Acknowledgments I am grateful to Serge Lang for his help and enthusiasm in this project as well as for teaching me mathematics and much more with so much generosity and patience

denominator by its conjugate In Section 5 students simplify problems that combine any of the four operations with complex numbers addition subtraction multiplication and division and write the answer in a bi form Section 6 contains problems where students solve quadratic equations and write the answer in a bi form Finally Section 7 contains the step by step solutions for the 108 problems in this workbook
