**A Mathematical Theory of Design: Foundations, Algorithms and Applications** D. Braha, O. Maimon, 2013-04-17 Formal Design Theory PDT is a mathematical theory of design The main goal of PDT is to develop a domain independent core model of the design process The book focuses the reader s attention on the process by which ideas originate and are developed into workable products In developing PDT we have been striving toward what has been expressed by the distinguished scholar Simon 1969 that the science of design is possible and some day we will be able to talk in terms of well established theories and practices The book is divided into five interrelated parts The conceptual approach is presented first Part I followed by the theoretical foundations of PDT Part II and from which the algorithmic and pragmatic implications are deduced Part III Finally detailed case studies illustrate the theory and the methods of the design process Part IV and additional practical considerations are evaluated Part V The generic nature of the concepts theory and methods are validated by examples from a variety of disciplines FDT explores issues such as algebraic representation of design artifacts idealized design process cycle and computational analysis and measurement of design process complexity and quality FDT s axioms convey the assumptions of the theory about the nature of artifacts and potential modifications of the artifacts in achieving desired goals or functionality By being able to state these axioms explicitly it is possible to derive theorems and corollaries as well as to develop specific analytical and constructive methodologies

**Making Problems, Creating Solutions** Jill Ostrow, 1999 In Making Problems Creating Solutions Jill Ostrow rethinks the teaching of mathematics and shows teachers how to build challenging learning environments in elementary classrooms She introduces the notion of workshop learning in mathematics and demonstrates ways in which teachers can readily integrate math into all curricular areas Traditional mathematics instruction consists of statements of rules followed by examples which define those rules the tell show and do model Under this model math concepts are fed to students in a sequence determined by the teacher rather than the intellectual readiness of the child Alternatively Jill takes a process approach to mathematics acquisition that is based upon understanding challenge independence confidence and choice Such an approach makes it easier for kids to apply their

knowledge to new problems and to other areas of their lives Making Problems Creating Solutions gives educators a chance to see the NCTM Standards as well as many other mathematics curricula put into authentic practice provides examples of solutions and thinking strategies of students ages 6 to 12 describes a new and innovative approach to teaching calendar contains a large section on assessment features an extensive appendix of problems with each problem annotated to show which standard is being addressed This book shows teachers how to encourage kids to create problem solving strategies and then to share and discuss those strategies with peers It is an appropriate text for both preservice and inservice programs as well as math inservice workshops In Making Problems Creating Solutions Jill places meaning and purpose at the heart of her mathematics program and in turn gives teachers ideas and techniques that will inspire critical thinking in young mathematicians
