processing and new optimization techniques **Logical and Relational Learning** Luc De Raedt,2008-09-27
I use the term logical and relational learning to refer to the sub-eld of artificial intelligence
machine learning and data mining that is concerned with learning in expressive logical or relational representations It is the union
of inductive logic programming statistical relational learning and multi relational data mining which all have contributed
techniques for learning from data in relational form Even though some early contributions to logical and relational learning
are about forty years old now it was only with the advent of inductive logic programming in the early 1990s that the field
became popular Whereas initial work was often concerned with logical or logic programming issues
the focus has rapidly changed to the discovery of new and interpretable knowledge from structured data often in the form of rules
and soon important successes in applications in domains such as bio and cheminformatics and computational linguistics were
realized Today the challenges and opportunities of dealing with structured data and knowledge have been taken up by the arti-
ficial intelligence community at large and form the motivation for a lot of ongoing research Indeed graph network and multi
relational data mining are now popular themes in data mining and statistical relational learning is receiving a lot of attention
in the machine learning and uncertainty in artificial intelligence communities In addition the range of tasks for which logical
and relational techniques have been developed now covers almost all machine learning and data mining tasks *AI and
