

## Network Design & Implementation Checklist

- Network Justification**

All decisions related to network design must be justified as necessary and/or optimal. Based on the applications used in a network, the network is typically designed using the existing (or new) channels of communication that are available (or need to be created).
- Network Scope**

The applications used and the common carriers that facilitate communication. The scope is based on any external geographic location as well as any location internal to any one site.
- Network Manageability**

The extent to which the network is capable of meeting the needs of its users: variability in traffic levels is maximized using slack to afford the entire network the most optimal performance. Constant tuning and performance tracking is discouraged to prevent overhead and excessive traffic at peak times.
- Network Architecture**
  - Local Area Network (LAN)
  - Wide Area Network (WAN)
  - Other Area Network (OAN)
  - Other available communications media
- Network Switch Mode**
  - Central switching method, or possible packet switching, circuit switching, or hybrid switching
- Network Node Location**
  - Nodes are located that are optimal to the entire network: central hubs, switches, routers based on the source and destination of traffic, other nodes based on high traffic volume, etc. Nodes are located to allow other network personnel can easily maintain them.
