Road and Track, 2007      **Solving Computationally Expensive Engineering Problems** Slawomir Koziel, Leifur Leifsson, Xin-She Yang, 2014-10-01 Computational complexity is a serious bottleneck for the design process in virtually any engineering area While migration from prototyping and experimental based design validation to verification using computer simulation models is inevitable and has a number of advantages high computational costs of accurate high fidelity simulations can be a major issue that slows down the development of computer aided design methodologies particularly those exploiting automated design improvement procedures e g numerical optimization The continuous increase of available computational resources does not always translate into shortening of the design cycle because of the growing demand for higher accuracy and necessity to simulate larger and more complex systems Accurate simulation of a single design of a given system may be as long as several hours days or even weeks which often makes design automation using conventional methods impractical or even prohibitive Additional problems include numerical noise often present in the simulation data possible presence of multiple locally optimum designs as well as multiple conflicting objectives In this edited book various techniques that can alleviate solving computationally expensive engineering design problems are presented One of the most promising approaches is the use of fast replacement models so called surrogates that reliably represent the expensive simulation based model of the system device of interest but they are much cheaper and analytically tractable Here a group of international experts summarize recent developments in the area and demonstrate applications in various disciplines of engineering and science The main purpose of the work is to provide the basic concepts and formulations of the surrogate based modeling and optimization paradigm as well as discuss relevant modeling techniques optimization algorithms and design procedures Therefore this book should be useful to researchers and engineers from any discipline where computationally heavy simulations are used on daily basis in the design process      *Organization, Representation, and Symbols of Power in the Ancient Near East* Gernot Wilhelm, 2012-07-07 In July 2008 the International Association for Assyriology met in Würzburg Germany for 5 days to deliver and listen to papers on the theme Organization Representation and Symbols of Power in the Ancient Near East This volume the proceedings of the conference contains 70 of the papers read at the 54th annual Rencontre including most of the papers from two workshop sessions one on collective governance and the other on the public and the state As the photo of the participants on the back cover demonstrates the surroundings and ambience of the host city and university provided a wonderful backdrop for the meetings      **Old Car Auction Bible** Brian Earnest, 2013-11-04 Straight from the auction block Old Car Weekly's Old Car Auction Bible is your handy resource for collector vehicle auctions from all corners of the U S In it the publishers of Old Cars Weekly and Old Cars Report Price Guide have compiled more than 40 important sales from around the country that can give hobbyists a true picture of what cars are selling for and where the collector car market is headed All the big auction houses are represented Mecum Russo and Steele
