Problem #4. An albino corn snake is crossed with a normal colored snake. The offspring are all normal-colored. When these first generation progeny snakes are crossed among themselves, they produce 32 normal colored-snakes and 10 albino snakes.

    a. Which of these phenotypes is controlled by the dominant allele?

The 3:1 ratio and the loss of the albino trait in the F_2 indicates that normal-colored is the dominant gene allele.
