Complex Variables and Applications 8e will serve just as the earlier editions did as a textbook for an introductory course in the theory and application of functions of a complex variable This new edition preserves the basic content and style of the earlier editions The text is designed to develop the theory that is prominent in applications of the subject You will find a special emphasis given to the application of residues and conformal mappings To accommodate the different calculus backgrounds of students footnotes are given with references to other texts that contain proofs and discussions of the more delicate results in advanced calculus Improvements in the text include extended explanations of theorems greater detail in arguments and the separation of topics into their own sections

In this part we present a survey of mean periodicity phenomena which arise in connection with classical questions in complex analysis partial differential equations and more generally convolution equations A common feature of the problem we shall consider is the fact that their solutions depend on techniques and ideas from complex analysis One finds in this way a remarkable and fruitful interplay between mean periodicity and complex analysis This is exactly what this part will try to explore It is probably appropriate to stress the classical flavor of all of our treatment Even though we shall frequently refer to recent results and the latest theories such as algebraic analysis or the theory of Bernstein Sato polynomials it is important to observe that the roots of probably all the problems we discuss here are classical in spirit since that is the approach we use For instance most of Chap 2 is devoted to far reaching generalizations of a result dating back to Euler and it is soon discovered that the key tool for such generalizations was first introduced by Jacobi As the reader will soon discover similar arguments can be made for each of the subsequent chapters Before we give a complete description of our work on a chapter by chapter basis let us make a remark about the list of references It is quite hard maybe even impossible to provide a complete list of references on such a vast topic
