

Chapter 4 Trigonometric Functions

Section 4.1 Radian and Degree Measure

Objective: In this lesson you learned how to describe an angle and to convert between degree and radian measure.

Course Number

Instructor

Date

Important Vocabulary

Define each term or concept.

Trigonometry The Greek word for "measurement of triangles."

Central angle of a circle An angle whose vertex is the center of the circle.

Complementary angles Two positive angles whose sum is $\pi/2$ radians or 90° .

Supplementary angles Two positive angles whose sum is π radians or 180° .

Degree A unit of angle measure, denoted by the symbol $^\circ$. A measure of one degree (1°) is equivalent to a rotation of $1/360$ of a complete revolution about the vertex of an angle.

I. Angles (Page 258)

An **angle** is determined by ... rotating a ray (half-line) about its endpoint.

The **initial side** of an angle is ... the starting position of the rotated ray.

The **terminal side** of an angle is ... the position of the ray after the rotation.

The **vertex** of an angle is ... the endpoint of the ray used in the formation of an angle.

An angle is in **standard position** when ... the angle's vertex is at the origin of a coordinate system and its initial side coincides with the positive x -axis.

A **positive angle** is generated by a counterclockwise rotation; whereas a **negative angle** is generated by a clockwise rotation.

If two angles are **coterminal**, then they have ... the same initial side and the same terminal side.

What you should learn
How to describe angles
