Computer Hardware and Organization Martha E. Sloan, 1976 **Complete Computer Hardware Only**, **Computer Engineering** C. Gordon Bell, J. Craig Mudge, John E. McNamara, 2014-05-12

Computer Engineering A DEC View of Hardware Systems Design focuses on the principles, progress, and concepts in the design of hardware systems. The selection first elaborates on the seven views of computer systems: technology, progress, logic, and memories, and packaging and manufacturing. Concerns cover power supplies, DEC computer packaging, generations, general packaging, semiconductor logic, technology, memory, technology, measuring, and creating technology, progress, structural levels of a computer system, and packaging levels of integration. The manuscript then examines transistor circuitry in the Lincoln TX-2 digital modules, PDP-1 and other 18-bit computers, PDP-8 and other 12-bit computers, and structural levels of the PDP-8. The text takes a look at cache memories for PDP-11 family computers, buses, DEC LSI-11, and design decisions for the PDP-11 60 mid-range minicomputer. Topics include reliability and maintainability, price-performance balance, advances in memory technology, synchronization of data transfers, error control strategies, PDP-11 45, PDP-11 20, and cache organization. The selection is a fine reference for practicing computer designers, users, programmers, designers of peripherals and memories, and students of computer engineering and computer science.
