Witness System Simulation Modeling Lanner:

Planning of Eco-efficient Process Chains for Automotive Component Manufacturing Christopher Schmidt, 2021-01-04 This book includes the introduction of emerging manufacturing technologies and planning cases with established technologies. The planning of eco-efficient process chains is crucial for manufacturing companies. However, in the state of the art, planning various barriers exist towards the integration of the environmental dimension. Against this background, a concept for the integration of classic lean and environmental criteria into the three planning phases of process chains is presented. During concept planning, the Technology Assessment Tool supports planners in the identification of eco-efficient technologies. During rough planning, the Value Stream Design Tool enables the derivation of a production line based on workpiece characteristics. For detailed planning, tools for eco-efficient machine and process chain configuration are provided. Three case studies from large-scale automotive component manufacturing with established and emerging technologies demonstrate the tool applicability.

Port Planning and Management Simulation Wenyuan Wang, Yun Peng, 2021-10-27 Port Planning and Management Simulation examines port planning simulation applications showing how they support better port decision making. Using a clear organizational format based on actual port system structure and operation processes, the book provides practical and theoretical insights on port planning and management. The book describes the water land collecting and distributing components of the port system, focusing on management development and risk mitigation. It examines the key challenges based on discrete system simulation theory that is less affected by local or national regulations. It compares various simulation scenarios for optimal port operational strategy. It quantifies port emissions, analyzes the impact of different reduction strategies, and presents operational strategies for green port planning development and management. Port Planning and Management Simulation provides guidance for carrying out deep analysis in a complex and dynamic system, providing an integrated solution framework based on simulation techniques for improving efficiency and cost savings of the port system. Bridges the gaps between theory, practice, and policy. Comprehensive practical and multidisciplinary content. Case Studies.

Comprehensive state of the art coverage of every important simulation technique. This fully revised book has the most comprehensive and up to date coverage of all aspects of a simulation study. Equally well suited for use in university courses, simulation practice and self study, the book offers clear and intuitive explanations as well as 300 figures, 218 examples and 217 problems. You will get detailed discussions on modeling and simulation, simulation software, model verification and validation, input modeling, random number and variate generation, statistical design and analysis of simulation experiments, experimental design, simulation optimization, agent based simulation, machine learning and much more. Authored by an operations research analyst and industrial engineer with more than 40 years of experience, *Simulation Modeling and Analysis* is widely regarded as the bible of simulation and now has more than 178,000 copies in print and 23,700 citations. This sixth edition has been streamlined with several chapters downsized to eliminate outdated simulation programs or statistical techniques that are rarely used in practice and are unnecessarily complicated. Most analyses of simulation output data can now be done using three simple and familiar statistical formulas or expressions. A new chapter covers AI and machine learning and their application to simulation. Covers what are arguably the three most innovative and popular simulation software packages: AnyLogic, FlexSim and Simio. Includes a set of instructor's resources. Has been used at universities such as University of California Berkeley, Stanford, Georgia Tech, Michigan, Cornell, Purdue, Virginia Tech, Penn State, Wisconsin, Columbia, Texas A M, Washington and Johns Hopkins.
