Abstract

The objective of the present study is to understand about all the problems occurring in the company because of improper application of material management. In construction project operation, often there is a project cost variance in terms of the material, equipments, manpower, subcontractor, overhead cost, and general condition. Material is the main component in construction projects. Therefore, if the material management is not properly managed it will create a project cost variance. Project cost can be controlled by taking corrective actions towards the cost variance. Therefore a methodology is used to diagnose and evaluate the procurement process involved in material management and launch a continuous improvement was developed and applied. A thorough study was carried out along with study of cases, surveys and interviews to professionals involved in this area. As a result, a methodology for diagnosis and improvement was proposed and tested in selected projects. The results obtained show that the main problem of procurement is related to schedule delays and lack of specified quality for the project. To prevent this situation it is often necessary to dedicate important resources like money, personnel, time, etc. To monitor and control the process. A great potential for improvement was detected if state of the art technologies such as, electronic mail, electronic data interchange (EDI), and analysis were applied to the procurement process. These helped to eliminate the root causes for many types of problems that were detected.

1. INTRODUCTION

Materials management is defined as a management system that is required in planning and controlling the quality & quantity of the material, punctual equipment placement, good price and the right quantity as required. Material management is a management system that integrates purchasing, shipping and material control from suppliers. Based on those definitions, generally materials management can be defined as a process of planning, executing, and controlling the right source of materials with the exact quality, at the right time and place suitable for minimum cost construction process. Capability to coordinate and integrate purchasing, shipping and material control from suppliers is required for material cost control. Three important phases that holds the key to a successful materials management are materials purchasing, materials usage, and storage .It is used to reduce the cost, which increases profitability and streamlines the production. Apart from management of material cost and its supply it helps in its proper utilization, transportation, storage, handling and distribution. Selection of personnel for marketing, purchasing, inventory control, stores management and materials handling and their training and placement is also to be seen by the materials management department This indicates that it is very essential to have a materials management department in any organization to support the management in the production activities. It also helps in the marketing, sales promotion and control of all the types of materials for its quantity, quality and cost. Thus, the objective

of this paper is to clarify the roles and possibilities of material management in construction.

The present case study was done at Raviz hills. It was noticed that the materials are improperly procured and stored and there is a lack of inventory control and improper management. The finest details of procurement process was studied and an attempt has been made to meet the effective transportation system, proper inventory control and purchase can be done with technological measures and also, determines the profit and loss that occur under particular schedule based on the purchasing and inventory stores.

2. EXPERIMENTAL METHODOLOGIES

The experimental analysis consists of theories and practical consideration of the concepts. Therefore, the present work was classified as follows.

- 2.1 Analysis of site and management
- 2.2 Analysis on Inventory controlling
- 2.3 Analysis on purchasing procedures
- 2.4 Analysis on Procurement and Tracking
- 2.5 Analysis on costs

2.1 Analysis of Site and Management

The analysis was done to understand what are all the problems occurring in the company because of improper application of material management. The solutions that provided in this work

Strategies in the Nigerian Construction Industry - (A Case Study of Selected Buildings Sites in Lagos State.). K.A.

Okorochoa,2016 This study on the Evaluation of Materials Management Strategies in the Nigerian Construction Industry Questionnaires were used to collect data from the construction participants Main factors of materials management were

summarized into five basic independent variables X namely materials planning x1 material procurement x2 material handling x3 material storage x4 and material usage x5 Six rating basic questions were asked and the numerical summation of the ratings formed the observed value for the independent variables in the case of that respondent The same was applied in the assessment of state of material management as applicable to construction industry in Nigeria Y which formed the dependent variable Multiple regression analysis was carried out on the data using E view package and SPSS package and the following relationship was established between the dependent and independent variables $Y = 1.084452539 - 0.5702062292x_1 - 0.114384169x_2 - 0.3604260282x_3 - 0.1852074864x_4 + 0.266328778x_5$ Testing the hypothesis using absolute value of T statistics and probability values show that among the factors studied only two of them planning x1 and handling x3 were statistically established as being critical to materials management in construction projects delivery in Nigeria Material planning and issuing system at sites should be automated in order to minimize human errors Storage of materials should only be maintained at minimal level in construction sites
