Parse Completion A Study Of An Inductive Domain:

Parse Completion Steven J. Nowlan,Artificial Intelligence and Psychology Project,Carnegie-Mellon University. Department of Psychology,1987 This paper presents a theoretical explanation of this class that attepts to understand what makes this induction problem difficult and to suggest where appropriate biases might lie to limit the search without overly restricting the richness of discoverable solutions The explorations in this paper are not intended to produce a practical induction algorithm although fruitful paths for such development are suggested **Architectures for Intelligence** Kurt Van Lehn,2014-01-14 This unique volume focuses on computing systems that exhibit intelligent behavior As such it discusses research aimed at building a computer that has the same cognitive architecture as the mind permitting evaluations of it as a model of the mind and allowing for comparisons between computer performance and experimental data on human performance It also examines architectures that permit large complex computations to be performed and questions whether the computer so structured can handle these difficult tasks intelligently **Mind Bugs** Kurt VanLehn,1990 As children acquire arithmetic skills they often develop bugs small local misconceptions that cause systematic errors Mind Bugs combines a novel cognitive simulation process with careful hypothesis testing to explore how mathematics students acquire procedural skills in instructional settings focusing in particular on these procedural misconceptions and what they reveal about the learning process **Government Reports Annual Index** ,1990 **Government Reports Announcements & Index** ,1990 **Developing Enterprise Chatbots** Boris Galitsky,2019-04-04 A chatbot is expected to be capable of supporting a cohesive and coherent conversation and be knowledgeable which makes it one of the most complex intelligent systems being designed nowadays Designers have to learn to combine intuitive explainable language understanding and reasoning approaches with high performance statistical and deep learning technologies Today there are two popular paradigms for chatbot construction 1 Build a bot platform with universal NLP and ML capabilities so that a bot developer for a particular enterprise not being an expert can populate it with training data 2 Accumulate a huge set of training dialogue data feed it to a deep learning network and expect the trained chatbot to automatically learn how to chat Although these two approaches are reported to imitate some intelligent dialogues both of them are unsuitable for enterprise chatbots being unreliable and too brittle The latter approach is based on a belief that some learning miracle will happen and a chatbot will start functioning without a thorough feature and domain engineering by an expert and interpretable dialogue management algorithms Enterprise high performance chatbots with extensive domain knowledge require a mix of statistical inductive deep machine learning and learning from the web syntactic semantic and discourse NLP ontology based reasoning and a state machine to control a dialogue This book will provide a comprehensive source of algorithms and architectures for building chatbots for various domains based on the recent trends in computational linguistics and machine learning The foci of this book are applications of discourse analysis in text relevant assessment dialogue management and content generation

Readings in Machine Learning Jude W. Shavlik,Thomas Glen Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors   Machine Learning D.
