According to Eq. (16) and the assumption $p = 1$, we get

$$f(\eta) = \frac{1348069}{7741440}\eta^2 - \frac{4887}{1075300}\eta^5 + \frac{451}{32560000}\eta^8 - \frac{1}{53225000}\eta^{11} - \cdots$$

Advances in Nonlinear Waves and Symbolic Computation Zhenya Yan,2009 With the rapid development of science and technology the computer has become an important tool in many science fields Particularly symbolic computation which is one of the most exciting and challenging areas It has been applied in many sciences such as mathematics physics chemistry biology mechanics engineering etc in particular non linear sciences ad complex sciences Nowadays many symbolic computation softwares have been used to deal with these problems Up to now there have existed many non linear differential difference systems related to solitons and chaos in the non linear science field In order to understand these complex physical phenomena it is important to research some of their basic properties Because of the complexity of these non linear systems with the symbolic computation this new book presents important research on non linear differential difference systems related to solitons and chaos as well as other non linear sciences in views of constructive algorithms *Mathematics Catalog 2005* Neil Thomson,2004-10 **Advances In The Homotopy Analysis Method** Shijun Liao,2013-11-26 Unlike other analytic techniques the Homotopy Analysis Method HAM is independent of small large physical parameters Besides it provides great freedom to choose equation type and solution expression of related linear high order approximation equations The HAM provides a simple way to guarantee the convergence of solution series Such uniqueness differentiates the HAM from all other analytic approximation methods In addition the HAM can be applied to solve some challenging problems with high nonlinearity This book edited by the pioneer and founder of the HAM describes the current advances of this powerful analytic approximation method for highly nonlinear problems Coming from different countries and fields of research the authors of each chapter are top experts in the HAM and its applications **Beyond Perturbation** Shijun Liao,2003-10-27 Solving nonlinear problems is inherently difficult and the stronger the nonlinearity the more intractable solutions become Analytic approximations often break down as nonlinearity becomes strong and even perturbation approximations are valid only for problems with weak nonlinearity This book introduces a powerful new analytic method for nonlinear problems homotopy analysis that remains valid even with strong nonlinearity In Part I the author starts with a very simple example then presents the basic ideas detailed procedures and the advantages and limitations of homotopy analysis Part II illustrates the application of homotopy analysis to many interesting nonlinear problems These range from simple bifurcations of a nonlinear boundary value problem to the Thomas Fermi atom model Volterra s population model Von Karman swirling

viscous flow and nonlinear progressive waves in deep water Although the homotopy analysis method has been verified in a number of prestigious journals it has yet to be fully detailed in book form Written by a pioneer in its development Beyond Pertubation Introduction to the Homotopy Analysis Method is your first opportunity to explore the details of this valuable new approach add it to your analytic toolbox and perhaps make contributions to some of the questions that remain open

Comprehensive Dissertation Index ,1984 **The Mathematical Scientist** ,2005 **Dissertation Abstracts International** ,1993-10 **Newsletter** New Zealand Mathematical Society,1988 *International Aerospace Abstracts* ,1994 **Mathematical Reviews** ,2005 <u>Government Reports Announcements & Index</u> ,1995 *Modified Homotopy Analysis Method* Ahmad El-Ajou,2014-06-11 We present a modification of an analytic technique namely the homotopy analysis method HAM to obtain symbolic approximate solutions for linear and nonlinear differential equations of fractional order This method was applied to three examples a fractional oscillation equation a fractional Riccati equation and a fractional Lane Emden equation which were presented as fractional initial value problems FIVPs We extend this modification to provide approximate solutions of linear and nonlinear fractional boundary value problems FBVPs Four examples are tested using the extended approach Also four physical problems are solved using the modification of the HAM The HAM is a strong and easy to use analytic tool for nonlinear problems and does not need small large parameters in the equations Comparison of the results with those of Adomian decomposition method ADM variational iteration method VIM and homotopy perturbation method HPM has led us to significant consequences The obtained results show that the present method is very effective and convenient in solving nonlinear cases and the ADM VIM and HPM are special cases of the HAM **American Men and Women of Science** ,1971 *Modified Homotopy Analysis Method* Ahmad Mohammad El-Ajou,2008

Introduction to Homotopy Theory Aneta Hajek,2015-08 Homotopy theory which is the main part of algebraic topology studies topological objects up to homotopy equivalence Homotopy equivalence is weaker relations than topological equivalence i e homotopy classes of spaces are larger than homeomorphism classes Even though the ultimate goal of topology is to classify various classes of topological spaces up to a homeomorphism in algebraic topology homotopy equivalence plays a more important role than homeomorphism essentially because the basic tools of algebraic topology homology and homotopy groups are invariant with respect to homotopy equivalence and do not distinguish topologically nonequivalent but homotopic objects The idea of homotopy can be turned into a formal category of category theory The homotopy category is the category whose objects are topological spaces and whose morphisms are homotopy equivalence classes of continuous maps Two topological spaces X and Y are isomorphic in this category if and only if they are homotopy equivalent Then a functor on the category of topological spaces is homotopy invariant if it can be expressed as a functor on the homotopy category Based on the concept of the homotopy computation methods for algebraic and differential equations have been developed The methods for algebraic equations include the homotopy continuation method and the continuation

method The methods for differential equations include the homotopy analysis method In practice there are technical difficulties in using homotopies with certain spaces Algebraic topologists work with compactly generated spaces CW complexes or spectra This book deals with homotopy theory one of the main branches of algebraic topology *Homotopy Asymptotic Method and Its Application* Baojian Hong,2017 As we all know perturbation theory is closely related to methods used in the numerical analysis fields In this chapter we focus on introducing two homotopy asymptotic methods and their applications In order to search for analytical approximate solutions of two types of typical nonlinear partial differential equations by using the famous homotopy analysis method HAM and the homotopy perturbation method HPM we consider these two systems including the generalized perturbed Kortewerg de Vries Burgers equation and the generalized perturbed nonlinear Schr dinger equation GPNLS The approximate solution with arbitrary degree of accuracy for these two equations is researched and the efficiency accuracy and convergence of the approximate solution are also discussed
