

# Using Difference Scheme Method and Matlab Technique for Numerical Solution to Telegraph Differential Equations

Antonio Ramos\*

\*University of Northern Iowa, Cedar Falls, United States

## Abstract

In this paper, we propose a numerical solution based in difference scheme method for telegraph equation, which is found that it is more suitable than ordinary diffusion equation on the case of reaction diffusion modelling. In the present work, numerical scheme to solve the hyperbolic telegraph equation was proposed by using difference scheme and approximating the solution. The scheme works in a similar fashion as finite difference methods. The results of numerical experiments are presented, and the comparison between analytical and numerical solution of telegraph equation confirmed that the method has the good accuracy, also the method was supported by high quality graphs by matlab.

Nataraj, 2018-02-03 This book addresses the topic of fractional order modeling of nuclear reactors Approaching neutron transport in the reactor core as anomalous diffusion specifically subdiffusion it starts with the development of fractional order neutron telegraph equations Using a systematic approach the book then examines the development and analysis of various fractional order models representing nuclear reactor dynamics ultimately leading to the fractional order linear and nonlinear control oriented models The book utilizes the mathematical tool of fractional calculus the calculus of derivatives and integrals with arbitrary non integer orders real or complex which has recently been found to provide a more compact and realistic representation to the dynamics of diverse physical systems Including extensive simulation results and discussing important issues related to the fractional order modeling of nuclear reactors the book offers a valuable resource for students and researchers working in the areas of fractional order modeling and control and nuclear reactor modeling

*New Insights into High-Energy Processes on the Sun and Their Geospace Consequences* Xiangliang Kong, Jing Liu, Gang Li, 2025-02-21 The Sun releases an enormous amount of energy during explosive solar activities such as solar flares and coronal mass ejections The solar corona can be heated up to tens of millions of degrees and a large number of charged particles can be accelerated to nearly the speed of light Heated plasmas and high energy particles increase solar radiations across the whole electromagnetic spectrum from radio to gamma ray wavelengths which can have a profound effect on the

Earth's upper atmosphere immediately after about eight minutes. These create additional ionization and heating in the Earth's upper atmosphere leading to radio blackout, GNSS signal interferences, and tracking loss, increased drag on spacecraft, etc. Recent studies have demonstrated that the effects can extend to the Earth's magnetosphere via electrodynamic coupling. When the high energy particles propagate through the interplanetary medium and arrive at the vicinity of the Earth, known as solar energetic particle (SEP) events, they can pose hazardous radiation threats to astronauts and spacecraft electronics in space.

**Delay Ordinary and Partial Differential Equations** Andrei D. Polyanin, Vsevolod G. Sorokin, Alexei I. Zhurov, 2023-08-28. *Delay Ordinary and Partial Differential Equations* is devoted to linear and nonlinear ordinary and partial differential equations with constant and variable delay. It considers qualitative features of delay differential equations and formulates typical problem statements. Exact, approximate, analytical, and numerical methods for solving such equations are described, including the method of steps, methods of integral transformations, method of regular expansion in a small parameter, method of matched asymptotic expansions, iteration type methods, Adomian decomposition method, collocation method, Galerkin type projection methods, Euler and Runge-Kutta methods, shooting method, method of lines, finite difference methods for PDEs, methods of generalized and functional separation of variables, method of functional constraints, method of generating equations, and more. The presentation of the theoretical material is accompanied by examples of the practical application of methods to obtain the desired solutions. Exact solutions are constructed for many nonlinear delay reaction-diffusion and wave-type PDEs that depend on one or more arbitrary functions. A review is given of the most common mathematical models with delay used in population theory, biology, medicine, economics, and other applications. The book contains much new material previously unpublished in monographs. It is intended for a broad audience of scientists, university professors, and graduate and postgraduate students specializing in applied and computational mathematics, mathematical physics, mechanics, control theory, biology, medicine, chemical technology, ecology, economics, and other disciplines. Individual sections of the book and examples are suitable for lecture courses on applied mathematics, mathematical physics, and differential equations for delivering special courses and for practical training.
