Fallgatter,Peter Walla,Georg Northoff,2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand

extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions *The Routledge Handbook of Language and Emotion* Sonya Pritzker,Janina Fenigsen,James Wilce,2019-12-06 The Routledge Handbook of Language and Emotion offers a variety of critical theoretical and methodological perspectives that interrogate the ways in which ideas about and experiences of emotion are shaped by linguistic encounters and vice versa Taking an interdisciplinary approach which incorporates disciplines such as linguistic anthropology sociolinguistics applied linguistics psychology communication studies education sociology folklore religious studies and literature this book explores and illustrates the relationship between language and emotion in the five key areas of language socialisation culture translation and transformation poetry pragmatics and power the affective body self and emotion communities situates our present day thinking about language and emotion by providing a historical and cultural overview of distinctions and moral values that have traditionally dominated Western thought relating to emotions and their management provides a unique insight into the multiple ways in which language incites emotion and vice versa especially in the context of culture With contributions from an international range of leading and emerging scholars in their fields The Routledge Handbook of Language and Emotion is an indispensable resource for students and researchers who are interested in incorporating interdisciplinary perspectives on language and emotion into their work

Lüdtke,2015-12-16 The miracle of children s language development and the joy of expressive language on the one hand and the vulnerability of language and the sorrow and grief caused by its distortion or even loss in people with aphasia or dementia on the other hand show us the inseparability of emotion and language in its extremes Although the emotional turn promised a paradigmatic shift from a rationalistic towards an emotion integrating conceptualization of language hardly any interdisciplinary research has focused on the interplay between emotion and language The present book covers the wide range of work on Emotion in Language with contributions from numerous disciplines in the three areas of Theory Research and Application With contributions both from well known pioneers in the area of this topic as well as from young scientists the book offers a broad range of perspectives from linguistics and language development to neurology psychology and developmental neuropsychology and to the fields of philosophy and phenomenology **The London Quarterly Review**
