

ELEMENTS OF A GRID

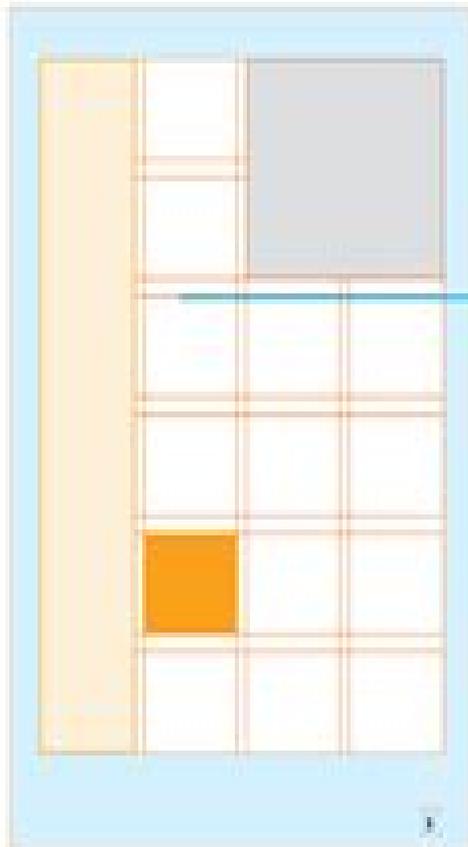

1. Know the Components

The main components of a grid are margins, columns, columns, headings, gutters, lines, and baselines. Starting with a page that is four pages wide and four pages high, you can see how all of these elements work together to create a grid.

MARGINS are vertical columns that hold text or images. The width and number of margins on a page or across the entire document are determined by the content.

MODULES are individual elements, typically, repeated across a grid. Consistent modules can create columns and rows of varying sizes.

MARGINS are the outer edges. They represent the amount of space between the text and the page content. Margins can also house secondary information, such as notes and captions.

MARGINS are groups of columns or rows that can be used to specify space for type, images, or other elements.

BASELINES are elements that break space into horizontal bands for which text, images, and graphics are created to guide a reader across a page.

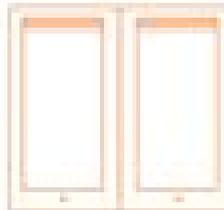

MARGINS are the outer edges of a document, including space reserved for content that appears in the text. To allow readers to view page numbers, running heads, and foot numbers, and notes.

BASIC GRID DIAGRAMS

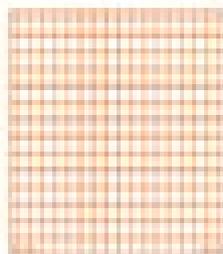

2. Learn the Basic Structures

Although the diagrams below show common structures, there are additional variations on the basic configurations. The modifications guide of margins and lines also extend beyond these columns to the rest of the page.

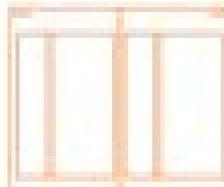

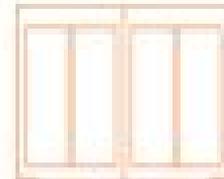

1 COLUMN GRID is a primary used for continuous reading text such as novels, reports, or books. The block of text is the main feature on the page, leaving a blank space.

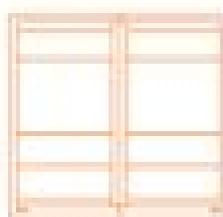

MARGINS are used for controlling the look of columns. Alternative use is margins, columns, lines, and lines. The margins control and horizontal columns, which control the structure of the text.

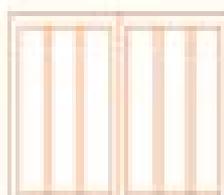

2 COLUMN GRID can be used to control a set amount of text within a specific column. A multi-column grid can be created with columns of equal or unequal width, or text placed in rows that are wider than the other. The main content is usually the width of the entire column.

MARGINS focus on page left lines. They determine the width of the column, the margins, and the lines. To make the margins, they determine the structure of the text.

MULTI-COLUMN GRID allows greater flexibility than single or two column grids. Columns within columns of varying widths can be used for reports and articles.

GRID OF LINES
