International Congress on Mathematics Education was held in Berkeley California USA August 10 16 1980 Previous
Congresses were held in Lyons in 1969 Exeter in 1972 and Karlsruhe in 1976 Attendance at Berkeley was about 1800 full and
500 associate members from about 90 countries at least half of these come from outside of North America About 450 persons
participated in the program either as speakers or as presiders approximately 40 percent of these came from the U S or
Canada There were four plenary addresses they were delivered by Hans Freudenthal on major problems of mathematics
education Hermina Sinclair on the relationship between the learning of language and of mathematics Seymour Papert on the
computer as carrier of mathematical culture and Hua Loo Keng on popularising and applying mathematical methods Gerge
Polya was the honorary president of the Congress illness prevented his planned attendance but he sent a brief presentation
entitled Mathematics Improves the Mind There was a full program of speakers panelists debates miniconferences and
meetings of working and study groups In addition 18 major projects from around the world were invited to make
presentations and various groups representing special areas of concern had the opportunity to meet and to plan their future
activities *Queueing Theory with Applications to Packet Telecommunication* John N. Daigle,2005 *Queueing Theory with
Applications to Packet Telecommunication* is an efficient introduction to fundamental concepts and principles underlying the
behavior of queueing systems and its application to the design of packet oriented electrical communication systems In
addition to techniques and approaches found in earlier works the author presents a thoroughly modern computational
approach based on Schur decomposition This approach facilitates solution of broad classes of problems wherein a number of
practical modeling issues may be explored Key features of communication systems such as correlation in packet arrival
processes at IP switches and variability in service rates due to fading wireless links are introduced Numerous exercises
embedded within the text and problems at the end of certain chapters that integrate lessons learned across multiple sections
are also included In all cases including systems having priority developments lead to procedures or formulae that yield
numerical results from which sensitivity of queueing behavior to parameter variation can be explored In several cases
multiple approaches to computing distributions are presented *Queueing Theory with Applications to Packet
Telecommunication* is intended both for self study and for use as a primary text in graduate courses in queueing theory in
electrical engineering computer science operations research and mathematics Professionals will also find this work
invaluable because the author discusses applications such as statistical multiplexing IP switch design and wireless
communication systems In addition numerous modeling issues such as the suitability of Erlang k and Pade approximations
