$$f(x) = x^4 - 2 \cdot x^3 + 6 \cdot x^2 - 2 \cdot x + 10$$

$$f(x, y) = \sin(x) + \cos(y)$$

$$A \cdot x = b \text{ where } A = \begin{bmatrix} a & b \\ c & d \end{bmatrix} \text{ and } x = [x1, x2]$$

$$\sum_{i=1}^n (x-a)^i \frac{f^{(i)}(a)}{i!} \text{ for } f(x) = \frac{\sin(x)}{x}$$

Numerical Methods in Scientific Computing: Germund Dahlquist, Ake Björck, 2008-09-04 This work addresses the increasingly important role of numerical methods in science and engineering. It combines traditional and well developed topics with other material such as interval arithmetic, elementary functions, operator series, convergence, acceleration, and continued fractions.

Managing Business Complexity Michael J. North, Charles M. Macal, 2007-03 Agent based modeling and simulation (ABMS) a way to simulate a large number of choices by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making. *Managing Business Complexity* is the first complete business oriented agent based modeling and simulation resource. It has three purposes: first to teach readers how to think about ABMS that is about agents and their interactions; second to teach readers how to explain the features and advantages of ABMS to other people; and third to teach readers how to actually implement ABMS by building agent based simulations. It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter. It is also a collection of ABMS business applications resources all assembled in one place for the first time. In short *Managing Business Complexity* addresses who needs ABMS and why, where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models.

Nonlinear Inverse Problems in Imaging Jin Keun Seo, Eung Je Woo, 2012-11-16 This book provides researchers and engineers in the imaging field with the skills they need to effectively deal with nonlinear inverse problems associated with different imaging modalities including impedance imaging, optical tomography, elastography, and electrical source imaging. Focusing on numerically implementable methods, the book bridges the gap between theory and applications, helping readers tackle problems in applied mathematics and engineering. Complete self contained coverage includes basic concepts, models, computational methods, numerical simulations, examples, and case studies. Provides a step by step progressive treatment of topics for ease of understanding. Discusses the underlying physical phenomena as well as implementation details of image reconstruction algorithms as prerequisites for finding solutions to non linear inverse problems with practical significance and value. Includes end of chapter problems, case studies, and examples with solutions throughout the book. Companion website will provide further examples and solutions, experimental data sets, open problems, teaching material such as PowerPoint slides and software including MATLAB m files. Essential reading for Graduate students and researchers in imaging science working across the areas of applied mathematics, biomedical engineering, and electrical engineering and specifically those involved in nonlinear imaging techniques, impedance

Computational Mathematics Robert E. White, 2003-09-17 Computational Mathematics Models Methods and Analysis with MATLAB and MPI explores and illustrates this process Each section of the first six chapters is motivated by a specific application The author applies a model selects a numerical method implements computer simulations and assesses the ensuing results These chapters include an abundance of MATLAB code By studying the code instead of using it as a black box you take the first step toward more sophisticated numerical modeling The last four chapters focus on multiprocessing algorithms implemented using message passing interface MPI These chapters include

Contributions are sourced from a variety of international experts and together these form a textbook collection of 14 non overlapping multidisciplinary sections in interval arithmetic whilst the concluding chapter offers instructions on how to implement interval algorithms Other problem areas addressed in the bulk of the volume include systems of nonlinear equations simultaneous methods for polynomial zeros linear systems matrix inversion matrix eigenvalue problems eigenvalues of selfadjoint problems ODE s PDE s optimization problems in engineering and complexity considerations in linear interval problems
