Sarris,2022-05-31 This monograph is a comprehensive presentation of state of the art methodologies that can dramatically enhance the efficiency of the finite difference time domain FDTD technique the most popular electromagnetic field solver of the time domain form of Maxwell s equations These methodologies are aimed at optimally tailoring the computational resources needed for the wideband simulation of microwave and optical structures to their geometry as well as the nature of the field solutions they support That is achieved by the development of robust adaptive meshing approaches which amount to varying the total number of unknown field quantities in the course of the simulation to adapt to temporally or spatially

localized field features While mesh adaptation is an extremely desirable FDTD feature known to reduce simulation times by orders of magnitude it is not always robust The specific techniques presented in this book are characterized by stability and robustness Therefore they are excellent computer analysis and design CAD tools The book starts by introducing the FDTD technique along with challenges related to its application to the analysis of real life microwave and optical structures It then proceeds to developing an adaptive mesh refinement method based on the use of multiresolution analysis and more specifically the Haar wavelet basis Furthermore a new method to embed a moving adaptive mesh in FDTD the dynamically adaptive mesh refinement AMR FDTD technique is introduced and explained in detail To highlight the properties of the theoretical tools developed in the text a number of applications are presented including Microwave integrated circuits microstrip filters couplers spiral inductors cavities Optical power splitters Y junctions and couplers Optical ring resonators Nonlinear optical waveguides Building on first principles of time domain electromagnetic simulations this book presents advanced concepts and cutting edge modeling techniques in an intuitive way for programmers engineers and graduate students It is designed to provide a solid reference for highly efficient time domain solvers employed in a wide range of exciting applications in microwave millimeter wave and optical engineering Modeling and Simulation of Coupled Electromagnetic Field Problems with Application to Model Identification and Metal Forming Jaan Alexander Unger,2007

Electromagnetic Scattering using the Iterative Multi-Region Technique Mohamed H. Al Sharkawy, Veysel Demir, Atef Z. Elsherbeni, 2007-06-01 In this work an iterative approach using the finite difference frequency domain method is presented to solve the problem of scattering from large scale electromagnetic structures The idea of the proposed iterative approach is to divide one computational domain into smaller subregions and solve each subregion separately Then the subregion solutions are combined iteratively to obtain a solution for the complete domain As a result a considerable reduction in the computation time and memory is achieved This procedure is referred to as the iterative multiregion IMR technique Different enhancement procedures are investigated and introduced toward the construction of this technique These procedures are the following 1 a hybrid technique combining the IMR technique and a method of moment technique is found to be efficient in producing accurate results with a remarkable computer memory saving 2 the IMR technique is implemented on a parallel platform that led to a tremendous computational time saving 3 together the multigrid technique and the incomplete lower and upper preconditioner are used with the IMR technique to speed up the convergence rate of the final solution which reduces the total computational time Thus the proposed iterative technique in conjunction with the enhancement procedures introduces a novel approach to solving large open boundary electromagnetic problems including unconnected objects in an efficient and robust way Contents Basics of the FDFD Method IMR Technique for Large Scale Electromagnetic Scattering Problems 3D Case IMR Technique for Large Scale Electromagnetic Scattering Problems 2D Case The IMR Algorithm Using a Hybrid FDFD and Method of Moments Technique Parallelization of the Iterative Multiregion Technique Combined Multigrid Technique and
