Dennis G. Zill,Patrick Shanahan,2003 Written for junior level undergraduate students that are majoring in math physics computer science and electrical engineering *Lecture Notes on Acoustics and Noise Control* Hejie Lin,Turgay

Bengisu,Zissimos P. Mourelatos,2022-01-03 This textbook provides a guide to the fundamental principles of acoustics in a straightforward manner using a solid foundation in mathematics and physics It is designed for those who are new to acoustics and noise control and includes all the necessary material for a comprehensive understanding of the topic It is written in lecture note style and can be easily adapted to an acoustics related one semester course at the senior

undergraduate or graduate level The book also serves as a ready reference for the practicing engineer new to the application of acoustic principles arising in product design and fabrication *A Discrete Hilbert Transform with Circle Packings* Dominik Volland,2017-12-01 Dominik Volland studies the construction of a discrete counterpart to the Hilbert transform in the realm of a nonlinear discrete complex analysis given by circle packings The Hilbert transform is closely related to Riemann Hilbert problems which have been studied in the framework of circle packings by E Wegert and co workers since 2009 The author demonstrates that the discrete Hilbert transform is well defined in this framework by proving a conjecture on discrete problems formulated by Wegert Moreover he illustrates its properties by carefully chosen numerical examples

Complex Analysis and Differential Equations Luis Barreira,Claudia Valls,2012-04-23 This text provides an accessible self contained and rigorous introduction to complex analysis and differential equations Topics covered include holomorphic functions Fourier series ordinary and partial differential equations The text is divided into two parts part one focuses on complex analysis and part two on differential equations Each part can be read independently so in essence this text offers two books in one In the second part of the book some emphasis is given to the application of complex analysis to differential equations Half of the book consists of approximately 200 worked out problems carefully prepared for each part of theory plus 200 exercises of variable levels of difficulty Tailored to any course giving the first introduction to complex analysis or differential equations this text assumes only a basic knowledge of linear algebra and differential and integral calculus Moreover the large number of examples worked out problems and exercises makes this the ideal book for independent study
